You will be contacted as soon as possible.
## Contents

1 **General introduction**  
  1.0 Introduction ............................................. 4  
  1.1 Mechanisms and functions of gamma-band synchronization .................. 6  
  1.2 Anatomy and function of the orbitofrontal cortex (OFC) ..................... 25  
  1.3 Anatomy and function of the barrel cortex ................................. 33  
  1.4 Aims of thesis ............................................ 35  
  1.5 Questions addressed in the experimental chapters ......................... 36

2 **Improved measures of phase-coupling between spikes and the Local Field Potential**  
  2.0 Introduction ............................................. 41  
  2.1 Definitions of conventional indices ...................................... 43  
  2.2 The problem of statistical dependence between spike-LFP phases .......... 49  
  2.3 Effect of dependence between spike count and phase ....................... 54  
  2.4 Relationship between the point-field PPC $\hat{P}_1$ and the spike train to field PPC .... 58  
  2.5 Discussion ................................................. 64

3 **An improved index of phase-synchronization for electrophysiological data in the presence of volume-conduction, noise and sample-size bias**  
  3.0 Introduction ............................................. 71  
  3.1 The linear mixture model ....................................... 72  
  3.2 Existing indices of phase-synchronization ................................... 73  
  3.3 The weighted phase-lag index ...................................... 75  
  3.4 Volume-conducting correlated sources of interest ........................... 75  
  3.5 Addition of uncorrelated, volume-conducted noise sources ................ 77  
  3.6 Detecting changes in the coherency between sources’ activities ........... 82
3.7 The problem of sample-size bias .................................................. 86
3.8 Comparison between the statistical power of the squared PLI and WPLI esti-
mators ................................................................. 93
3.9 Application to experimental LFP data: Methods ............................. 94
3.10 Application to experimental LFP data: Results ............................. 95
3.11 Discussion ................................................................. 99

4 The impact of noise and instantaneous mixing on measures of Granger causal flux direction ........................................... 107
4.0 Introduction ............................................................................ 109
4.1 Theoretical considerations .................................................. 109
4.2 Simulations ........................................................................... 113
4.3 Discussion ............................................................................ 116
4.4 Appendix A: Computational details for figures ................................ 117

5 Estimation of the entropy based on its polynomial representation .................................................. 119
5.0 Introduction ............................................................................ 121
5.1 Problem of entropy estimation ............................................ 122
5.2 Polynomial representation of the entropy function ............. 122
5.3 An unbiased estimator of the polynomial approximation function ........................................... 123
5.4 A combined estimator with Bayesian estimation of the remainder function ........................................... 124
5.5 Comparison of bias and error of entropy estimators ............. 128
5.6 Discussion ............................................................................ 132
5.7 Acknowledgements ................................................................. 135

6 Gamma oscillations in barrel cortex: cell-class specific synchronization and relation with visual cortex and medial temporal lobe system .......................... 137
6.0 Introduction ............................................................................ 139
6.1 Results .................................................................................. 140
6.2 Discussion ............................................................................ 156
6.3 Material and Methods ......................................................... 160

7 Learning-associated gamma-band phase-locking of action-outcome selective neurons in orbitofrontal cortex ........................................... 165
7.0 Introduction ............................................................................ 167
7.1 Material and Methods ......................................................... 168
7.2 Results .................................................................................. 175
7.3 Discussion ............................................................................ 189
7.4 Supplemental Material ................................................................. 192

8 NMDA receptors control cue-outcome selectivity and plasticity of orbitofrontal firing patterns during associative stimulus-reward learning ........................................... 197
8.0 Introduction ............................................................................ 199
8.1 Experimental Procedures .................................................. 200
8.2 Results ................................................................. 210
8.3 Discussion .......................................................... 220

9 General discussion .................................................. 227
  9.0 Summary of results .............................................. 228
  9.1 Discussion on statistical methods ............................. 230
  9.2 Discussion on experimental chapters .......................... 235

10 Nederlandse samenvatting ....................................... 245

11 References .......................................................... 251

12 List of publications ................................................ 289
