Observing invisible machines with invisible light: The mechanics of molecular machines

Panman, M.R.

Citation for published version (APA):
I extend my gratitude to all who have supported me and contributed towards the completion of this thesis. In particular, I would like to thank: my supervisor, Sander Woutersen, from whom I have learnt immensely over the years. My promotor, Wybren Jan Buma, for his valuable input and support. Fred Brouwer, René Williams, and Hong Zhang, for their input at group meetings and otherwise. The past and present members of the vibrational spectroscopy group (chronologically): Pavol Bodis (who has supervised and taught me in my earliest phases as a researcher), Danny Shaw, Adriana Huerta-Viga (my paranimph), Sérgio Domingos (my paranimph), Alisa Rupenyan, Tibert van der Loop, Heleen Meuzelaar, Chris van Dijk (amongst many things, for his help with programming and electronics), Steven Roeters, Saeed Amirjalayer. I hope that all my future colleagues are as helpful and fun to work with. The past and present members of the Molecular Photonics group I have had the pleasure of working with: Tomislav Suhina, Tatu Kumpulainen, and Roel A. Klein Nijenhuis (from organic chemistry) for helping me with my stress management. The ladies and gentlemen at Homkat, in particular Vladica Bocokic (for his advice on the preparation of samples and fruitful discussions). Hinco “groote broer” Schoenmakers (from our colleagues at AMOLF), who has always made time to help. The master and bachelor students whom I have had the pleasure to supervise: Arthur C. Newton, Jannie Vos, and David den Uyl. The work presented in this thesis would never have been completed were it not for a legion of technicians: Hans Sanders, W. van Aartsen, Steven Kettelarij, Michiel Hilbers, Hans Agema, Ed te Water, Dick Bebelaar, Michiel Groeneveld, Harry Beukers, Henk Luiten, Jan Geenevasen, Jan Meine Ernsting, and countless others. I also thank my doctoral reading committee for making time to evaluate my thesis. Huib Bakker, Jacob Panman, and Karen Panman for critically reading my thesis manuscript. Finally, Claire van der Meer, for providing all the support I required to complete my doctoral research.
