Contents

1 Introduction 1
  1.1 Motivation .................................................. 1
  1.2 Problem Statement ......................................... 3
  1.3 Organization ............................................... 4

2 A Review of 3D Reconstruction: Towards Scene Investigation Using Handheld Cameras 7
  2.1 Overview of 3D Reconstruction From Video Sequences ........... 8
  2.2 Lens Distortion Correction .................................. 9
  2.3 Feature Processing ........................................ 10
    2.3.1 Interest Points ..................................... 11
    2.3.2 Lines ............................................... 14
    2.3.3 Initial Matching Strategy ......................... 15
    2.3.4 Summary and Conclusion .......................... 16
  2.4 Structure and Motion Recovery ................................ 16
    2.4.1 Multiple View Geometry and Stratification of 3D Geometry ... 17
    2.4.2 Projective Structure and Motion .................. 20
    2.4.3 Metric Structure and Motion ..................... 21
    2.4.4 Degeneracy ....................................... 22
    2.4.5 Reconstruction from Videos ....................... 23
    2.4.6 Summary and Conclusion .......................... 24
  2.5 Model Creation ........................................... 25
    2.5.1 Rectification ....................................... 25
    2.5.2 Stereo Mapping ..................................... 26
    2.5.3 Mesh building and Texture mapping ................ 28
    2.5.4 Discussion ....................................... 29
  2.6 Conclusion and Discussion ............................... 29
3 A Theoretical Analysis of The Perspective Error in Blob Detectors 31
  3.1 Introduction ................................................. 32
  3.2 Background on Blob Detectors ................................. 32
    3.2.1 The blob detector family ................................. 33
    3.2.2 Characteristics ..................................... 33
  3.3 Perspective Drift ............................................. 34
    3.3.1 Notation ............................................ 34
    3.3.2 Perspective drift for one camera ....................... 34
    3.3.3 Relative perspective drift for two cameras .......... 37
    3.3.4 Effects on 3D reconstruction ......................... 38
  3.4 Experiments .................................................. 39
    3.4.1 Experimental setup .................................. 39
    3.4.2 Projected relative perspective drift ................. 40
    3.4.3 Manifestations in reconstruction results ............ 42
    3.4.4 Discussion ......................................... 45
  3.5 Conclusion .................................................. 45

4 3D Modeling of Indoor Scenes Using Handheld Cameras 47
  4.1 Introduction ................................................ 48
  4.2 Background .................................................. 49
    4.2.1 The 3D modeling process ............................... 49
    4.2.2 Degeneracy ........................................ 49
  4.3 Modeling Framework for Indoor Scenes ...................... 52
    4.3.1 Frame Filter ......................................... 52
    4.3.2 Frame Segmentation ................................ 53
    4.3.3 Structure recovery ................................ 54
  4.4 Results ...................................................... 55
    4.4.1 Evaluation of frame filtering ......................... 55
    4.4.2 Evaluation of frame segmentation ................. 58
    4.4.3 Final result ...................................... 58
  4.5 Conclusion .................................................. 59

5 A Semi-interactive Panorama Based 3D Reconstruction Framework for Indoor Scenes 61
  5.1 Introduction ................................................ 62
  5.2 Related Work ............................................... 63
    5.2.1 Reconstruction from panoramas ...................... 63
    5.2.2 Interaction in reconstruction ....................... 64
  5.3 Framework Overview ....................................... 64
  5.4 Building a Walls-And-Floor Model ......................... 66
    5.4.1 Smart corner picking ................................. 67
    5.4.2 Rectifying panoramas ................................ 67
    5.4.3 Estimating the floor-plan ......................... 68
    5.4.4 Reconstructability analysis ....................... 70
    5.4.5 The capture assistant .............................. 71
