# TABLE OF CONTENTS

## Chapter 1 Introduction

1.1 General Concepts of Biomineralization .................................................. 1
1.2 Biocalcification in Scleractinian Corals and Mollusks ............................. 2
1.3 Why to Study Biomineralization Proteins of Aquatic Calciifiers .......... 5
1.4 Outline of the Thesis ............................................................................ 12

## Chapter 2 Novel Molluskan Biomineralization Proteins Retrieved from Proteomics: a Case Study with Upsalin

2.1 Introduction ......................................................................................... 19
2.2 Background ....................................................................................... 21
2.3 Materials and Methods ....................................................................... 22
2.4 Sample collection and characterization .............................................. 25
2.5 General strategy for the identification of Upsalin ............................... 26
2.6 Identification of a cDNA fragment ..................................................... 27
2.7 Rapid amplification of cDNA ends (5’ and 3’-RACE) ............................ 28
2.8 Purification, amplification and sequencing .......................................... 29
2.9 Amplification of the full nucleotide sequence and quantitative real-time PCR ................................................................. 30
2.10 In silico analysis of the deduced amino acid sequence ....................... 31
2.11 Extraction of the shell organic matrix ................................................ 31
2.12 Protein purification and characterization on mono-dimensional gel and on Western blots ............................................................... 32
2.13 Proteomic analysis of the purified fraction ........................................... 33
2.14 Antibody production and ELISA testing ............................................. 34
2.15 Glycosylation studies ........................................................................ 34
2.16 In vitro interaction of the purified protein with calcium carbonate .... 35
2.17 Immunogold localization of the purified protein on shell fragments .... 36
2.18 Results .............................................................................................. 36
2.19 Characterization of *Unio pictorum* shell ........................................... 36
2.20 Identification of a nucleotide sequence coding for a 12 kDa protein .......... 37
2.21 Primary structure and molecular features of Upsalin ....................... 39
2.22 Tissue specific gene expression of Upsalin ....................................... 41
2.23 Homology search .............................................................................. 42
5.3.4 Organic matrix characterization on mono-dimensional gels and Ca-overlay test ................................................................. 119
5.3.5 Analysis of the protein content of the SOM by proteomics ........ 120
5.3.6 Analysis by Fourier Transform Infrared Spectroscopy (FTIR-ATR) and by Raman spectroscopy ...................................... 120
5.3.7 Sugar analysis ..................................................................... 121
5.3.8 In vitro crystallization tests in the presence of ASM ............... 122
5.4 Results .................................................................................. 123
5.4.1 Skeletal morphology and microstructure ................................ 123
5.4.2 Skeletal organic matrix on gel ............................................. 126
5.4.3 Fourier transform IR of the ASM and AIM .......................... 126
5.4.4 Monosaccharide composition of the ASM and AIM ............ 129
5.4.5 Characterization of skeletal organic matrix proteins (SOMPs) .. 130
5.4.6 In vitro interaction of the acid soluble matrix with CaCO₃ .... 134
5.5 Discussion ............................................................................ 139

Chapter 6 Conclusions and Perspectives ................................... 147
Appendix A ................................................................................ 154
Appendix B ................................................................................ 158
Appendix C ................................................................................ 183
References ................................................................................ 187
Samenvatting ........................................................................... 207
Publications ............................................................................. 211
Submitted Publications ............................................................. 212
Acknowledgements .................................................................. 213
