It is not permitted to download or to forward/distribute the text or part of it without the consent of the author(s) and/or copyright holder(s), other than for strictly personal, individual use, unless the work is under an open content license (like Creative Commons).

Disclaimer/Complaints regulations

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <https://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Table of contents

1	Heterogeneous catalyst discovery using 21st century tools	1
1.1	Introduction	1
1.2	Typical workflow for catalyst development	3
	Typical precursor selection and catalyst synthesis considerations	4
	Typical catalyst testing considerations	5
1.3	Integrating modeling methods in catalyst research	6
	Statistical experimental design	7
	Explorative data analysis	11
	Descriptor-performance relationships for heterogeneous catalysis	15
	An example – the selective hydrogenation of 5-ethoxymethylfurfural (EMF)	16
	Developing new descriptors	19
1.4	References	21
2	Experimental investigation of the selective reduction of ethoxymethylfurfural over Al₂O₃-supported catalysts	23
2.1	Introduction	23
2.2	Experimental section	24
	Materials and instrumentations	24
	Procedure for catalyst synthesis	26
	Procedure for catalyst testing	27
2.3	Results and discussion	27
	General trends in selectivity	28
	Effect of temperature on conversion and selectivity	33
	Effect of solvent on catalyst performance	36
2.4	Conclusions	39
2.5	References	40
3	Understanding catalytic biomass conversion through data mining	41
3.1	Introduction	41
3.2	Results and discussion	43
	Temperature effects in activity and selectivity	44
	Effect of main metals and promoters	45
	Applying data mining methodology	47
	A simple explanation of the concept of PCA	48
	Description of the dataset	49
	Modelling results	49
3.3	Conclusions	53
3.4	References	54

4	Predicting chemisorption energies on metals using simple descriptor models	55
4.1	Introduction	55
4.2	Methodology	58
	Data set selection	58
	Variable selection and modeling methods	59
	Adsorption measurements	60
	Equipment	62
	Measurement method	62
4.3	Results and discussion	63
	Modeling the DFT data set	63
	Applying the method to experimental adsorption data	68
4.4	Conclusions	72
4.5	References	73
5	Application of descriptor- performance relationships	75
5.1	Introduction	75
5.2	Experimental section	78
	Materials and instrumentation	78
	General procedure for catalyst synthesis	78
	Procedure for catalytic hydrogenation experiments	80
5.3	Results and discussion	80
	Applying Slater type orbitals (STOs) as catalyst descriptors	82
	Modeling the monometallic catalysts data set	85
	A more complex case – bimetallic catalysts	89
5.4	Conclusions	94
5.5	References	95
6	Finalizing the workflow	97
6.1	Using descriptor models in catalyst discovery	97
6.2	Conclusions	103
	Summary	105
	Samenvatting	107
	Acknowledgements	109
	Publications	110
