You will be contacted as soon as possible.

# Acknowledgements

---

Having reached the last pages of this manuscript it is time for some well deserved acknowledgements. First a formal acknowledgement to NWO for funding part of this research under the CASIMIR program. This funding was essential to close the budget. When considering budget, of course I also have to acknowledge the management team at Avantium. Tom, Frank, Gert-Jan: thanks for facilitating this, both in terms of money paid, time spent and quite important, allowing me to spend a large portion of my time on this. A big thank you also goes to Guus, although you are no longer part of the Avantium team, you are the one that got me started on this path and paved the way for me.

A special thank you goes to the team at Siluria Technologies – Wayne and Erik, the fact that you allowed us to perform a large portion of your research based on the modeling methods described in this thesis provided a big boost for the development. Daniel, now part of the Siluria team, I probably made your life quite difficult when you were the project leader but you always gave me the support I needed in generating just the right data.

Many people at Avantium supported me in my efforts, too many to name here. Two people should really be named in person. Sergio – your efforts in generating the hydrogenation data set are very much appreciated, I know it wasn't easy. Ben – thanks for always having the time during the first years to listen to me bouncing ideas off you. At the UvA a lot of people supported me in making sure I had the right data – Marjo, thanks for your persistence in measuring the chemisorption data – or to make sure that I wrote things up in an understandable manner – Manuel, thanks for your efforts in reviewing the papers again and again and for always providing suggestions to clarify things. Gadi, I know I am not the easiest person in the world to work with but you really helped me a lot by providing guidance and support. Although we were often in disagreement on the best course of action, the end result always worked out.

Last but not least thanks to my family, I couldn't have done this without the support that allowed me to lock myself up, be grumpy or to shout at my computer. And really, I am almost done now, really...
