Effects of tamoxifen and exemestane on cognitive functioning

A study in postmenopausal breast cancer patients

The studies presented in this thesis were performed at the Division of Psychosocial Research and Epidemiology at the Netherlands Cancer Institute - Antoni van Leeuwenhoek Hospital Amsterdam, in collaboration with the study coordinators of the Dutch part of the Tamoxifen and Exemestane Multinational (TEAM) trial.

The studies were supported by an independent research grant from Pfizer.

Financial support for publication of this thesis by the Integraal Kanker Centrum Amsterdam (IKA)/Comprehensive Cancer Center Amsterdam, (CCCA)* and the Netherlands Cancer Institute is gratefully acknowledged.

*The CCCA is one of eight Comprehensive Cancer Centers in the Netherlands. Its area is the north-western part of the Netherlands and involves 2,800.000 inhabitants, 16 general hospitals, two university hospitals and the Netherlands Cancer Institute.

The comprehensive cancer centers (CCC's) in the Netherlands have been founded to provide comprehensive and high-quality cancer care close to home for all cancer patients. The CCCA provides and coordinates a collaboration of all health care professionals and institutions involved in cancer and palliative care. The CCCA functions as a centre of knowledge and quality care that helps to improve cancer treatment, patient care and clinical research as well as prevention of cancer and decrease of cancer mortality.
