The most read section of my thesis; I hope it doesn’t disappoint you. There is but one name on the cover, but many contributed scientifically or non-scientifically to its culmination.

First Peter. I couldn’t have wished for a better mentor. I appreciate your approachability, involvement, and critical approach. Thank you for the stimulating scientific conversations and for your enthusiasm for your area of research, that has become mine as well. Aryan, thank you for setting up this unique and large-scale study, for having faith in me, and for assigning me to your beautiful project. Frans, my thesis would have never come about without all your statistics teaching. All three of you, thank you for your supervision and the freedom you gave me to work from Zürich, to follow courses, and to do extra research projects. Maggie, Bart, Ludo, Frank, and Judith, thank you very much for taking the time out of your busy schedules to review my thesis and be my opponents. To all parents and children who participate in the Dutch Dyslexia Programme (DDP): thank you so much for your dedication. You taught us a great deal about dyslexia. I have recognized your participation by representing you and your child on the cover.

The research group Learning Problems (OLP) changes in composition, but remains characterized by diverse personalities that together form a warm nest and a close team. I miss you guys. I reminisce about the good time in G0.05, the Coffee Company (our other office), the conferences and accompanying holidays, and the writing retreats. Eva and Judith acted as my big OLP-sisters. Judith, thank you for taking care of me. Eva, thanks for being a role model. We grew up in neighbouring villages and shared as kids the same recorder teacher, but only really got to know each other in OLP. Unfortunately we don’t live in neighbouring villages any more, but nowadays you Skype me weekly from Sydney, no matter whether I am in Amsterdam, York, or Oxford. Marleen and Debora, once we formed the new OLP trio and shared our joys and sorrows. Debora, many thanks for your support, smile, and working out-of-hours company. Haytske, you are open, full of energy and special, and I like that. Titia, so much that we share: passion for science, the DDP, and of course our self-developed NEMO-project. Madelon and Marloes, my fellow Peter-PhD-students, it’s great to have you by my side during this nerve wrecking hour and the preparations. Madelon, I enjoy discussing analyses and reading research
with you. During one of our Coffee Company sessions even a new project was born, the EM-project, which will shine in your thesis. Marloes: great energy. Although we only had a short period together in OLP, I got to know you well because of the writing retreat and the Canada holiday. Britt: great chef, fresh DDP-blood, and NEMO help; super! Anna, Ben, and Evelien, many thanks for all your DDP work and for answering my questions. Other colleagues that I like to mention: Dominik and Julia (we started together in the C-building), Maaike (adoptive sister), Anne and Cristina (fellow reading researchers), Suzanne (juggeling mate), and Helma, Jantine, Francine and Bettina (social-emotional bulwark).

Moving on to the researchers outside the University of Amsterdam that contributed to my scientific development. Faculty of Human Movement Sciences, thank you for providing good education and the challenges beyond, and for fuelling scientific passion. Mark, Lisa, and Andrew, thanks to you I had an amazing internship in Aberdeen. Mark, thank you for your confidence in me as a researcher, especially when I had lost mine. Minna and JLD, thank you for initiating our fruitful international collaboration; kiitos. Maggie and CRL, I had a nice and valuable study visit in York. Many thanks for your help with my research proposal. Excellent that we are now both based in Oxford. Robin, we never run out of things to talk about, research and stats in particular. I have good memories of your stay with us in Amsterdam and I love being together in Oxford. Simon, thank you for the exciting multidisciplinary collaboration. Dorothy and OSCCI, thanks a lot for welcoming me in the research group and for offering me this excellent opportunity to expand my (scientific) horizon. Kate and LCD, thank you for the ‘honorary membership’. Oriel College and Orielenses, I feel privileged to be part of you. It is a sometimes slightly bizarre but brilliant experience.

For the highly needed mental distraction and physical outlet I was lucky to have session for 10 hours/week at gymnastics club Olympia and sport acrobatics club CCO. It was good fun! Thanks to, among others, Map, Guido, our flyers Simone, Tamara and Miranda, and of course my base and sister Anke. Anke, we have been through a lot together and I am proud of you. Oxford Sirens, so cool to be part of the cheerleading competitive squad. Yet again somersaults and throwing girls… Professor Van der Werf and his team: amazing. My life is a present. My family in law, Zoia, Adi, Pierre and Bernadette, thanks for your support and interest. Brothers Aart and Geert, and sisters Anke
and Janneke, I am so happy to have you! Rita, Bart, and Suzanne, it's great to have you in the family. Mommy and daddy, you always being there for me gives me such a secure feeling. I love coming home. Yves, you are my soul mate, my rock; even though it's again at distance. I can't live without you.

Elsje
