Table of contents

Introduction

Chapter 1 General Introduction – Prenatal screening: why, what and how?

Part I – Subtle markers and chromosomal anomalies

Chapter 2 Increased nuchal translucency before 11 weeks of gestation: Reason for referral?
Published – Prenatal Diagnosis (2021)

Chapter 3 Adverse pregnancy outcomes in fetuses with early increased nuchal translucency:
prospective cohort study
Accepted – Ultrasound in Obstetrics and Gynecology (2024)

Chapter 4 Prenatal sonographic features can accurately determine parental origin in
triploid pregnancies
Published – Prenatal Diagnosis (2020)

Chapter 5 Understanding the risk of gestational trophoblastic neoplasia following a
partial molar pregnancy – A systematic review and meta-analysis
Submitted – under embargo

Chapter 6 Mifepristone and misoprostol in patients with a partial molar pregnancy:
an option to consider?
Manuscript in preparation

Part II – Detection of structural anomalies in first- and second trimester

Chapter 7 Diagnostic accuracy of ultrasound screening for fetal structural abnormalities
during the first and second trimester of pregnancy in low-risk and unselected
populations
Published – Cochrane Database of Systematic Reviews (2021)

Chapter 8 Eliminating First Trimester Combined Testing: Consequences for Early Detection
of Significant Fetal Anomalies
Accepted – Prenatal Diagnosis (2024)

Chapter 9 Early detection of isolated severe congenital heart defects is associated with a lower threshold to terminate the pregnancy
Published – Fetal Diagnosis and Therapy (2023)

Chapter 10 The prevalence of genetic diagnoses in fetuses with severe congenital heart defects
Published – Genetics in Medicine (2020)

Discussion and future perspectives

Chapter 11 Summary

Chapter 12 Nederlandse samenvatting

Chapter 13 General Discussion and future perspectives
