Acknowledgements

I would like to thank my promotor Peter Sloot and my co-promotor Jaap Kaandorp for their patience and guidance throughout this whole process. Special thanks to Jaap, who has spared time and effort to make me feel part of the research group despite my being so far away in Singapore most of the time. I cannot thank you enough for being so helpful and kind throughout this whole PhD process. Special thanks also to Peter Todd who does have to put up with me in Singapore and probably does not get enough credit for dealing with my nonsense day in and day out. Thank you for being patient with me, and I do apologise if I have been a pain at times!

Not enough thanks can be given to Barbara Brown for her endless support, guidance, ideas and input, integrity, encouragement, kindness, patience...and for pretty much being the most awesome supervisor ever. When I grow up I want to be just like you! And to Richard Dunne, I also cannot thank you enough for the same reasons above – and also for always challenging me to be a better scientist! I thank you both for taking the time and effort to teach me how science should be.

Many thanks also to Prof. Chou Loke Ming and Paul Erftermeier for all your support and guidance, especially at the beginning of this PhD – and for the many beers and Stroopwafels! To Claire Jeuken, I cannot thank you enough for being so supportive throughout this PhD and always sparing the time and effort to find real solutions for my probably laughable problems. You are the sweetest!

I owe many many thanks to Naline Thongtham, for whom the work in Phuket for this PhD would not have been doable! Thanks for always being so helpful despite your own very busy schedule. And also for keeping me well fed with yum phla duk fu in between coral coring!!! Thank you also to the Director of the Phuket Marine Biological Centre (PMBC), Mr. Niphon Phongsuwan, Dr. Somkiat Khokiattiwong, Dr. Hansa Chansang and the staff at the PMBC (especially Kung, Bang Ismail, Meow, Nan).

Thank you to Jennie Lee – without you, the scale of research in this PhD would not have been pulled off! I am so happy to have met you for not only are you an excellent collaborator, but also an awesome friend! Thanks to you and Seah Ying Geat for arranging all the mountainous logistics so our fieldwork together will have a better chance at going smoothly. Thanks for keeping me well fed with chou doufu, and pretty much for all the great fun times in Malaysia!! Many thanks also to Kee Alfian who has also been so very welcoming, helpful and been there from the get go of this project. Thanks also to Prof. Che Abdul Rahim and Affendi Yang Amri for your support.

To Sin Tsai Min, thank you for always being there for me – you were there from the very beginning (and even before) of this very up and down PhD journey. Thank you for being the best non-supervisor ever! Thanks for listening to me rant, being my sounding board, calming me down with beer, and taking me through random scenarios on WoW. Thanks for keeping me (relatively) sane – know that I would not have been able to survive this PhD without you! For the Horde!

To Kyler Tan, thanks for being the best coral corer and fieldwork buddy I know! You are as much a part of this PhD as the crucial coral cores you help retrieve! Intan Suci Nurhati, my “work spouse”, thanks for having my back and being ever so very patient with me throughout this learning journey. Also many thanks to all my fieldwork buddies, lab mates and friends who has helped me over the years – Ow Yan Xiang, Rocel Poquita (Rosa), Yee Keat, Michelle Lee, Lionel Ng, Siti Maryam Yaakub, Toh Kok Ben, Jeffrey Low (J.Lo!), Karenne Tun, Neo Meilin, Yujie Zheng, Pavel Zemsky.

To Prof. Sandy Tudhope (Edinburgh University), Dr. Janice Lough and Mr. Eric Matson (Australian Institute of Marine Science): thank you so very much for taking the time and effort to help me through my PhD journey, and for sharing, teaching me and allowing me to learn from your experiences.

Many thanks also to Katie Yewdall (Blueventures, Tioman), East Divers Tioman, East Marine Langkawi, Tropical Marine Science Insitute, Marine Parks Malaysia, Singapore National Parks Board, and National Research Council Thailand for allowing and enabling this PhD research work.

To Abby Ng and Zeehan Jaafar, thanks for helping me to “make hay while the sun shines” throughout this PhD...hur hur hur. You guys are the most awesome friends ever, and thanks for always being there and coming to my rescue (whether I think need it or not)!

To my very patient and loving partner Robin Blackburn, who has had to read and edit countless drafts of this thesis: out of ten, you are an eleven...and more! Enough said!

To my lovely parents, for without them I would not be here today. Ma and Pa, I cannot thank you enough your unconditional support and love through good and bad times – yes, I appreciate even the nagging too...sometimes. I love you both very much.
