Acknowledgements

The work presented in this thesis is the result of teamwork, collaboration, and commitment to advance HIV prevention science and policy on the part of colleagues from countries in Africa, North America, Asia, Latin America and the Caribbean, and Europe. They include biomedical HIV prevention trial investigators, modellers, researchers, advocates, people living with HIV, United Nations co-workers, government staff, politicians, and HIV prevention activists.

My promotor Professor Joep M.A. Lange from the University of Amsterdam surprised me with a ‘why not’ reply to my query about the wisdom of getting a PhD and has encouraged me every step of the way, providing constructive comments and suggestions. My co-promotor Professor Peter Piot from the London School of Hygiene and Tropical Medicine, University of London provided insightful guidance that helped strengthen the introduction and discussion. I am very grateful to both my co-promotors for their intellectual stimulation and unwavering support.

The PhD team at the Amsterdam Institute for Global Health and Development has facilitated the submission and approval process. I particularly would like to thank Marja Nieuwpoort, Jacqueline Eelman, and Linde Nieuwenhuys for all their help.

I would like to thank all the fine professional colleagues that I have had the privilege of working with on different subjects since arriving in the vibrant learning environment of the Amsterdam Institute for Global Health and Development.

Robert Hooykaas translated the summary into Dutch and Katrin Korfmann kindly gave permission for me to use one of her photographs that has intrigued me since her work was presented at the 2012 Anatomische Les at the Concertgebouw.

Although it is unusual to acknowledge examiners before the thesis defence I would nonetheless like to thank Professors Roel Coutinho, Timothy Hallett, Anita Hardon, Peter Reiss, Helen Weiss, and Dr. Chewe Luo for taking time from their busy personal and professional lives to read my thesis, prepare for the defence, and, for those living outside Amsterdam, to travel to Amsterdam.

I would also like to thank my paranymph Barbara de Zalduondo for coming here to stand with me. A big thanks goes to my family for flying from Western Canada to Amsterdam for the thesis defence and cheering me on through this whole process.

I would like to make special mention of two people who have provided comments on texts in English and Dutch and made many helpful suggestions. They are my close friend Jacqueline van Tongeren of the Amsterdam Institute for Global Health and Development and my partner and paranymph Eddy Beck of the UNAIDS Caribbean Regional Support Team. Above all, their moral and emotional support has been invaluable.
