Acknowledgments

After several years of hard work, I have finally reached the end of my Ph.D. project. I am more than grateful to my supervisor, Wouter den Haan, without whom the quality of this project would not have been the same. I have learned so many things from him, not only about macroeconomics and solving numerical problems, but also about many other things. He spent so much time to shape my research, helped to take off the sharp edges, and strongly advised me to “Pretend to be an English gentleman,” something that will almost certainly be useful in the rest of my life. He taught me to hit the send button, in fact, he forced me to do so. Wouter’s enthusiasm is contagious and has made me enthusiastic about macroeconomics, algorithms, and programming. I will never forget that I wrote my first lines of Ox code during Wouter’s macro course and my first lines of Matlab code during his dynamic programming course, things that I still find really enjoyable.

Wouter’s interpretation of holiday reading is rather technical. For my first vacation as a Ph.D. student, he gave me a paper explaining the Bayesian estimation procedure of VAR models with time-varying parameters, which has eventually resulted in no less than three chapters in this dissertation. During the various stages of working on these chapters, I have benefited enormously from the discussions I had with Wouter and from the uncountable number of comments he wrote in the margins. Wouter and I have worked together on another chapter, a process that I really enjoyed. Of course, I also would like to thank my other co-authors, Pieter Gautier, Eric Bartelsman, Pierre Lafourcade, and Luca Gambetti, for the great cooperation.

I would like to thank De Nederlandsche Bank, where I have written by far the largest part of this dissertation during the time they generously gave me to work on my Ph.D. project, and the CPB Netherlands Bureau for Economic Policy Analysis, where I have written the last part of this dissertation during my research time. I would like to thank my (former) colleagues at both institutions for the pleasant cooperation. In particular, I would like to thank Gabriele Galati and Pierre Lafourcade for our great discussions. Furthermore, I would like to thank my colleagues at the University of Amsterdam, in particular the guys from the reading group (Markus, Matija, Petr, Siert, Tim, and Vincent) as well as Christian Stoltenberg and Ward Romp. Our interactions have made me a much better economist.

Finally, I really need to thank my wife, Annie Wong, for the many hours she spend sitting next to me behind the computer to keep me working and motivated. Without Annie’s help
and especially her sacrifices, this Ph.D. project would have taken at least twice as long. I also would like to thank the grandparents of my daughter, Mila, for the many times they have been babysitting. Last, but by no means least, I would like to thank the “Buitenwind” family, my parents Jacobien and Herman and my sister Astrid for their unconditional love and support.
