## Contents

**Introduction**

1 Strangeness production .......................... 3

1.1 Introduction to strangeness ..................... 3

1.2 The Quark Model ................................. 5

1.3 Proton-proton collisions ......................... 8

1.4 Monte Carlo simulation .......................... 10

1.5 Generators ...................................... 15

1.5.1 PYTHIA ........................................ 15

1.5.2 HERWIG ....................................... 17

1.5.3 EPOS .......................................... 18

1.5.4 Comparing to recent data ...................... 19

1.6 Summary ......................................... 21

2 ATLAS ............................................. 23

2.1 The Large Hadron Collider ......................... 23

2.2 The ATLAS experiment ............................. 26

2.2.1 Muon Spectrometer .................................. 28

2.2.2 Calorimeters .................................... 29

2.2.3 Trigger system .................................. 30

3 Inner Detector ...................................... 33

3.1 Pixel detector ...................................... 33

3.2 Semiconductor Tracker ............................. 36

3.2.1 SCT lay-out ...................................... 37

3.2.2 Operations ...................................... 39

3.2.3 Tracking performance ......................... 41

3.2.4 Radiation damage ............................... 44

3.3 Transition Radiation Tracker ....................... 46

3.4 Data Quality Monitoring ......................... 47

4 Low $p_T$ tracking .................................. 51

4.1 Tracks ........................................... 51

4.2 Energy loss ....................................... 54
4.2.1 Bethe–Bloch .............................................. 54
4.2.2 Distribution of energy loss .............................. 58
4.2.3 \(\frac{dE}{dx}\) and resulting signal in the pixel detector .............................. 60
4.2.4 Very low momentum particles .............................. 63
4.3 Particle identification .................................. 63
4.3.1 Energy loss fit ........................................ 63
4.3.2 Particle ID performance ................................. 65
4.4 Summary .................................................. 67

5 Event and track selection ................................. 69
5.1 Kinematic acceptance .................................. 69
5.2 Data samples and \(\phi\)-meson selection .................. 71
5.2.1 Data samples .......................................... 71
5.2.2 Simulation samples ................................... 74
5.2.3 Event selection ...................................... 75
5.2.4 \(\phi(1020)\)-meson candidate selection .............. 75
5.3 Event selection efficiencies .............................. 79
5.3.1 Minimum bias trigger ................................ 79
5.3.2 Vertex reconstruction ................................ 80
5.4 Track selection efficiencies ............................. 80
5.4.1 Track reconstruction .................................. 81
5.4.2 Kaon identification ................................... 87
5.5 Summary .................................................. 94

6 The \(\phi\)-meson production cross section ................. 95
6.1 Signal extraction ....................................... 95
6.1.1 Systematic uncertainty in yield determination .... 96
6.2 Monte Carlo cross checks ............................... 99
6.3 The differential cross section ............................ 103
6.4 Extrapolated differential cross section ................. 106
6.5 Discussion .............................................. 110
6.6 Summary ................................................ 112

A Relativistic Breit–Wigner signal shape ................. 115
B Tabulated result \(\phi(1020)\)-meson cross section ........... 117

Bibliography ................................................. 119

Summary ................................................... 129

Samenvatting ............................................ 131

Dankwoord .................................................. 135
