Supplement 1 Search strategy

The search strategy was created by Renate van de Ven, Janneke Staaks, and Ben Schmand.

Search Question

Cognitive training of executive functioning, attention, and working memory. Training aim needs to be restoration, thus not improvement of internal or external strategies (e.g., excluding PDA). Training needs to be done on a computer, but not virtual reality or simulations. Study aim should not merely be feasibility of a training but also includes outcome measures.
