You will be contacted as soon as possible.
## Contents

1 Introduction .......................... 1

1-1 Protein structure and function .................................. 2
1-2 The mechanism of protein folding .............................. 4
  1-2.1 Transition pathways ........................................... 4
  1-2.2 The free energy landscape view ............................... 5
1-3 Conformational changes in proteins .............................. 8
1-4 Computational modelling of complex transitions ........... 11
  1-4.1 Conformational changes in proteins are rare events .... 11
  1-4.2 The development of new rare event algorithms to study conformational changes in proteins .......................... 13
1-5 Outline of this thesis ............................................. 14
1-6 References ....................................................... 15

2 Computer Simulations of Rare Events ....................... 19

2-1 Molecular dynamics ............................................. 20
2-2 Rare events ....................................................... 23
2-3 Finding the mechanism of a rare event ...................... 24
  2-3.1 Reaction coordinates: Defining collective variables to describe a transition ........................................... 25
  2-3.2 Committor probabilities .................................... 25
  2-3.3 Free energy landscapes .................................... 27
  2-3.4 Rate constants ................................................... 28
2-4 Free energy methods ............................................. 30
  2-4.1 Umbrella sampling ............................................. 30
  2-4.2 Metadynamics .................................................. 32
2-5 Transition path methods ......................................... 34
  2-5.1 The minimum energy path ..................................... 35
  2-5.2 The minimum free energy path ............................... 36
  2-5.3 String method to determine the MFEP ..................... 37
  2-5.4 Calculation of the mean force and the metric tensor using MD .......................... 39
6 Predicting the Mechanism of Dissociation/Formation of the GCN4 Leucine Zipper Domain

6-1 Introduction ................................. 134
6-2 Methods .................................. 137
  6-2.1 Molecular dynamics .................. 137
  6-2.2 Path-metadynamics ................. 138
  6-2.3 Collective variables ................. 138
  6-2.4 Set-up of path-metadynamics simulations ................. 140
6-3 Results .................................. 144
  6-3.1 Formation/dissociation can occur via multiple routes .................. 144
  6-3.2 Separate contributions to the unfolding/dissociation mechanism .......... 146
6-4 Discussion and conclusion ............... 158
  6-4.1 Molecular insight along the average transition paths ................. 158
  6-4.2 Convergence of the free energy profiles .................. 160
  6-4.3 A sufficient set of collective variables to describe the formation of GCN4 leucine zipper .......... 160
6-5 References ................................ 162
