Foreign Direct Investment and Poverty Alleviation in Tanzania: A Case of Bulyanhulu and Geita Gold Mines Limited in Kahama and Geita Districts

Emmanuel Maro Nyankweli

1. Mining venture helps to combat poverty through broad-based growth and sustainable development.
2. CSR increases effective engagement in poverty reduction efforts
3. There are clear improvement of the socio-economic status of their residents, compared to similar rural areas
4. The effects of mining on the country's economy as a whole will remain limited, because the mining sector is relatively small in size and inadequately linked to other parts of the economy
5. Government and other stakeholders should review mining policy and laws, in order to provide fair and equitable distribution of mineral exploitation proceeds.
6. Value-adding activities in mineral processing should be directly promoted, to secure enhanced benefits for Tanzania's mineral exports;
7. It is necessary to link large-scale mining with the domestic economy
8. Strategic social and environmental impact assessments of large-scale mining need to be conducted, in order to determine the cumulative effects of mining
9. Future research should be directed at assessing the relationship between profit, corporate income taxes and corporate social responsibility of foreign mining companies in Tanzania and elsewhere.
