## Acknowledgements

A PhD project, especially if you perform experiments with thousands of plants, is not possible without the help of many people!

To my promoter, Peter, I would like to say thanks for all your help. Especially in the final stages of writing and finishing the chapters. You must have read the chapters about ten times! Although I was not always happy with your remarks (remember the SPSS incident!), this thesis would not have looked this way without you. Many thanks!

To my co-promotor and daily supervisor, Danny, I would like to say thanks, because you really were a *daily* supervisor even when you changed jobs and moved to Oxford. I could always go to you and you never made me feel like I asked a stupid question. I could not have asked for a better supervisor. If I would have to mention a negative side, it would be your knack for devising ridiculously big experiments ;-).

To all my co-authors, Brigitte, René, Clemens, Richard Visser, Richard Michelmore, and Eric, I would like to say thanks for our collaboration, the fruitful discussions, and comments that greatly improved the chapters. Let's hope these will all be published soon!

Melis, I'm so happy we started our PhD projects at the same time! I really enjoyed our time together on courses and conferences in Groningen, Lunteren, Vienna, and Seattle. Watching killer whales and walking on Mount Rainier in the sun and snow was a special experience. And let's not forget the great journey of 2011 to Turkey! The food, the landscapes, the company, your lovely family: Turkey is tamam! Thanks for your company, humor, great food snacks and great pies, and our conversations. You are more than tamam!

Thomas, it took a bit of time for me to get used to you. This guy that always had these weird remarks! But once I realized that almost everything you said was not meant seriously but ironically, I got a handle on your enormous sense of humor and started to really love you. So in your own words and style: you have been the driving force during my PhD project. You were always there to help me or to share your brilliant ideas with me. I am forever grateful!!

Harold, I'm so happy with you! You have lugged around hundreds of lettuce plants, (the word sorting must have gotten a whole new meaning ;-)) and you have planted or sown thousands of lettuce plants! Always in a good mood and always cheering me up. I learned new words from you (koedie koedie), I had a lunch buddy to sit next to, and most importantly, we had a lots of laughs together. Hopefully, we will have lots of laughs in the future as well. Let's set one date already: Queensday next year!

Thijs, Ludek, Rob, and Louis, I can't thank you enough for all your help! Transplanting seedlings, counting of branches, side shoots, and seeds, sowing seeds, collecting biomass samples, weighing biomass samples, carrying these biomass samples around, watering plants, getting electrocuted by an electric fence (I won't say where, Rob!), tipping over in a canoe, and so on. My requests were usually not simple and involved lots of manpower, time, and effort, but you always helped me and really made these experiments possible. 'Ik ga jullie zien!'

Eric, this is the second time I mention you! Not only have you been a co-author and helped me greatly in improving my thesis, I was also very glad to have you as a colleague. Especially your talent to start a sentence, start thinking about it when you are still talking and change direction in the middle of your sentence, has always fascinated me! I wish you all the best with your new job in Wageningen and I'm sure you will do great!

## Acknowledgements

Erik, Johannes, Heo and Jane, thanks for the company and good laughs the past years! I'm sorry to see you all leave to go to Wageningen. The room will be very empty! I wish you all the best with finishing your PhD projects!

Patrick, thanks for all your help and advice, whether it was on questions about computer programs, statistical analyses, help with greenhouse and field work, advice on how to make this book, and I could go on. You really are a man of all trades (van alle markten thuis) and of course a good supplier of licorice. I have to admit I have stolen many dropjes!

Rogier and Setareh, I have never met two more determined, dedicated and, most importantly, funny master students. I had some great times together with you, for example in Turkey. I wish you all the best with finishing your studies (Yes Setareh, at some point you have to finish, you can't keep doing new internships. And yes, Rogier at some point you should actually write the final reports!) and with your future careers! Cheers!

You would think I have mentioned everybody that has helped with my experiments in the greenhouse and in the field by now. But no! Many, many thanks as well to Lin, Betsie, Peter Kuperus, Hans Breeuwer, Noemi, Roos, Jan van Arkel, Jacques, Valeria and anyone I still forgot to mention! I would also like to thank all other colleagues that have helped me somewhere along the way.

Special thanks to Gerard and Sheila. Gerard, I don't think you know how big of an influence you have been in my life since I started studying biology. It has been your enthusiasm that has prompted me to do my internships with you. My field work on *Liparis loeselii* (Groenknolorchis or Fen orchid) was absolutely great and I decided I wanted to work in conservation biology in the future. We even wrote a proposal together for a PhD project that unfortunately was not approved. Luckily, this PhD project became available, which was off topic in terms of conservation biology, but we stayed in close contact. Through discussions with you and Sheila the idea for an ecology agency came along, which in the end evolved into our new foundation Science4Nature. I'm very happy that because of the two of you, I'm back at the path of conservation biology, working on the conservation of beautiful species, such as *Primula vulgaris* (Stengelloze sleutelbloem).

I would like to pay special tribute to my parents, who have always supported me in the choices that I made. You did not question me, when I decided to follow my heart and study biology, a study that does not automatically have good career options. You have supported me, when I went to Ghana and New Zealand, although you did not like the fact I was so far away. You even helped in the greenhouse and with my field experiments, when I did not have enough manpower for those, in hindsight, ridiculously big experiments. Thanks for planting seedlings, digging holes in the ground, and most of all, for being there for me. I love you.

Saving the best for last, I like to thank my partner in crime, Marcel. I met you about half a year before my PhD project started, so you have experienced the entire project from start to finish with its ups and downs. You have supported me practically, for example with driving big watertanks to my field site, and most importantly mentally, when I was feeling down and thought I would never ever manage. I could not have done it without you, I love you!
