<tr>
<th>C: ABSTRACTION</th>
<th>C1: CONSTRUCT CONCEPTUALLY</th>
<th>C2: DECONSTRUCT</th>
<th>C3: RESTRUCTURE</th>
<th>C4: TRANSFORM</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increasing complexity in abstraction: Apparently remote and incompatible concepts, functions or contexts are analyzed, deconstructed, restructured and ultimately transformed on a structural level through defocused and focused attention.</td>
<td>Analyzing remote categories and contexts on a deep structural level and constructing novel concepts through complex and systematic combinations.</td>
<td>Deconstructing concepts, functions and contexts on a deep structural level can be used to analyze specific structures of various and apparently incompatible concepts, functions or contexts for restructuring, through focusing on possible novel use of these structures in remote contexts (disassembly use).</td>
<td>Mapping the complex structure of one concept, function or context to restructure another remote concept, function or structure in a non-obvious way (dissociation). Problem analysis &amp; problem definition: 1: break-frame/conceptual change. 2: relating existing structures to remote, non-obvious structures. 3: combining knowledge of existing structures for the creation of new structures through analogical thinking.</td>
<td>Blending two apparently incompatible structures (far transfer) into a radically new concept, function or category through bisociation. This requires 1) abstraction: a systematic comparison of two concepts on a structural level (types of objects or categories). 2) complex combination: mapping similarities on a structural level that can be used to create a novel structure (analogical or metaphorical thinking). 3) the blending of structures into a novel structure; a structure is radically transformed.</td>

| **A: ASSOCIATION**  
Increasing complexity in association:  
By combining remote concepts and generation of non-obvious or surprising ideas through retrieval from long-term memory and/or through analogical thinking. | Types of thinking to generate ideas from more closely related ideas to more remote ideas (from a stimulus). |
| A1: ASSOCIATE FREELY  
Free generation of as many associations as possible from a stimulus. | **1: INCREMENTAL THINKING**  
To retrieve knowledge from memory and step-by-step thinking. |
| A2: ASSOCIATE FLEXIBLY  
Generation of as many diverse associations as possible (chains of associations). | **2: FLEXIBLE THINKING**  
To switch flexibly between different categories. |
| A3: DISSOCIATE  
Generation of unrelated concepts from a stimulus, that is generation of as many remote associations as possible. | **3: REMOTE THINKING**  
To think from an entirely different perspective and to make mental leaps. |
| A4: BISOCIATE  
Generation of associative combinations of two (bisociation) or more remote concepts. | **4: SYNTHESIZING THINKING**  
Far analogical thinking, envisioning and mental blending. |

| B: COMBINATION  
Increasing complexity in combination:  
Combining different features and functions for broad uses through imagination and/or through semantic combinations. | |
| B1: ADJUST  
Adding or changing one of the features or properties of a specific object or function (features like colour, shape, size, texture) through association. | |
| B2: MERGE  
Flexibly combining all features or properties of two or more objects, subjects or functions. | |
| B3: RECOMBINE  
1) Splitting the object or function into parts or functions.  
2) Combining remote properties and functional parts for non-obvious, novel purposes or functions. | |
| B4: RECONNECT  
Using functions in remote, non-obvious contexts or for novel, broad use purposes. (shoe as ‘weapon’). | |
