You will be contacted as soon as possible.
List of Figures

2.1 Projects operating in a world without business cycles .......................... 23
2.2 Effect of arbitrarily small business cycles on boundary projects .......... 24
2.3 Projects affected by business cycles ................................................. 35
2.4 Projects affected by business cycles in the presence of financial frictions 59
2.5 Fraction of total wages earned by recently non-employed workers ....... 74

3.1 Kalman smoothed states: benchmark .................................................. 86
3.2 Job finding probability ...................................................................... 89
3.3 Unemployment rate ........................................................................... 89
3.4 Decomposition of the cumulative drop in the job finding rate ............. 91
3.5 Indication of the degree of non-linearity ............................................. 94
3.6 Match efficiency, robustness: alternative functional forms .................. 96
3.7 Vacancies, robustness: alternative estimation ....................................... 97
3.8 Match efficiency, robustness: alternative estimation ......................... 97
3.9 Match efficiency, robustness: using vacancy yield data ....................... 99
3.10 Match efficiency, robustness: extended sample .................................. 99
3.11 Match efficiency, robustness: Monte Carlo experiment ...................... 101
3.12 IRFs to a positive one-standard-deviation technology shock, 1st calibration 110
3.13 Idiosyncratic productivity cut-offs, cases with and without firing costs . 112
3.14 IRFs to a positive one-standard-deviation technology shock, model with firing costs ................................................................. 117
3.15 Estimated match efficiency and its model prediction ........................... 119
3.16 Kalman smoothed states: benchmark and other specifications ........... 125
3.17 Kalman smoothed states: benchmark and subsamples ....................... 127

4.1 Firm shares according to size and age ................................................. 144
4.2 Differential employment growth rate and the unemployment rate ......... 149
4.3 Actual-counterfactual unemployment decomposition; old firms .......... 150
4.4 Model time-line ................................................................................. 154
4.5 True value function and its perturbation approximation; illustration . . 165
4.6 Comparing the true and approximate solutions . . . . . . . . . . . . . . 166
4.7 Firm shares according to age for small firms, model and data . . . . . . 173
4.8 Firm shares according to size for young firms . . . . . . . . . . . . . . . 173
4.9 Firm exit rates according to age, model and data . . . . . . . . . . . . . 175
4.10 Job creation rates according to age, model and data . . . . . . . . . . . 175
4.11 Job destruction rates according to age, model and data . . . . . . . . . 176
4.12 Decomposition of IRF of the unemployment rate . . . . . . . . . . . . 178
4.13 IRFs to an aggregate productivity shock . . . . . . . . . . . . . . . . . . . 180
4.14 KS algorithm, accuracy plot for $q$ . . . . . . . . . . . . . . . . . . . . . . 191
