Acknowledgements

The defence of my PhD thesis is a great occasion to express my gratitude towards the people who have made the last five years in Amsterdam such a great time, both privately and professionally. First of all I want to thank Hessel, not only for being an amazing supervisor (I listened to his advice more often than he might think), but for being a great friend. I hope we will be talking, drinking, travelling, cooking, playing cards and working together for a long time to come. Many thanks also go to Erik, whose advice and insight improved many a research design and paper, and who is always great fun to be around.

Apart from my supervisors, the person who contributed the most to this thesis (and my fledgling career as an economist) is Muriel. I would like to thank her for her repeated invitations to Stanford University, her hospitality, her advice and her confidence in my skills. I would also like to thank my coauthors on past and current projects which are not included in this thesis: Anna, Jose, Noemi, it is a pleasure to work with you and I have learned a lot from each of you.

I would also like to thank my other past and future colleagues at TIER – Adam, Diana, Jona, Monique, Nadine, Nienke and Nina – for their help and advice as well as fun times. I am excited to keep working with you in the future. I am also grateful to the people at CREED who were always helpful and supportive of my infringement on their experimental turf.

My time at TI and UvA has not only led to this thesis but also to some lasting friendships without which my years in Amsterdam would have been a much less memorable experience. Christel, Eva, Marcel, Marcel and Stephen: we shared innumerable great times (and, with some of you, a house) together and although you soon will be scattered over various continents, I know we will always stay in touch. Luckily for my own mental sanity (if probably not theirs) I have also found great friends who do not spend their days researching obscure economic problems. Thanks a lot to Alexandra, Amanda, Carol, Floris, Ingrid, Job, Martin, Val and all the other people whom I have shared food, drinks and conversations with during the past five years.

My years of studying which led up to this thesis would not have been possible without my parents. They were always supportive when I put off serious employment to pursue yet another academic degree. For this I will always be grateful.

But most of all I want to thank my wonderful wife Lygia who dropped her life in Brazil to come live with me in this cold and unknown country called the Netherlands. I cannot wait to find out what our future together holds in store for us.
