1 Introduction 1

2 Do they understand the benefits from education? Evidence on Dutch high school students’ earnings expectations 9
  2.1 Introduction ................................. 9
  2.2 The Dutch educational system .................. 11
  2.3 The data .................................. 13
    2.3.1 Survey method .......................... 13
    2.3.2 Description of respondents ............. 14
  2.4 How unreliable is an internet survey? .......... 19
    2.4.1 Specific sensitivities .................. 19
    2.4.2 Non-response .......................... 20
    2.4.3 Bunching .............................. 21
    2.4.4 Inconsistencies ....................... 23
    2.4.5 Assessment ............................ 28
  2.5 Expectations: median earnings ................ 28
    2.5.1 Characterizing the observations .......... 28
    2.5.2 Do they mirror actual data? ............ 30
    2.5.3 Explaining expected medians .......... 34
  2.6 Expectations: quantifying risk .............. 36
    2.6.1 Measuring risk and skewness .......... 36
    2.6.2 Characterizing variance and skewness ... 37
3 Wage Variance Estimation Accounting for Selection and Unobserved Heterogeneity: Are the Results Robust?

3.1 Introduction ............................................. 51
3.2 Chen’s model ............................................. 53
  3.2.1 The theoretical model ................................. 53
  3.2.2 Model estimation and parameter identification ......... 56
3.3 Data ....................................................... 58
3.4 Replication ................................................. 61
  3.4.1 First Stage: using national unemployment rates as instument .......... 63
  3.4.2 Causal effects of schooling on average wages ............. 66
  3.4.3 Main results ........................................... 66
  3.4.4 Conclusion on the replication ............................ 71
3.5 Applying the analysis to American women ..................... 72
3.6 Estimation on British data ................................ 74
  3.6.1 British educational system .............................. 75
  3.6.2 Wage variance in British data ......................... 75
3.7 Estimation on German data ................................ 76
  3.7.1 German educational system .............................. 78
  3.7.2 Wage variance in German data ......................... 79
3.8 Conclusion ................................................... 80
3.A Appendix: Correct standard errors in Heckman two-step procedure ........... 83
3.B Appendix: English data and estimations ........................ 84
3.C Appendix: German data and estimations ........................ 91
3.D Appendix: Summarizing scheme ............................... 95
4 Does risk matter? A Semiparametric Model for Educational Choices in the Presence of Uncertainty 97
  4.1 Introduction ................................................. 97
  4.2 Theoretical model ........................................... 100
    4.2.1 A model for school choice and wages in the presence of uncertainty .................................................. 101
  4.3 Semiparametric estimation of a Roy model with multiple sectors 106
    4.3.1 Schooling probabilities as sufficient statistics in single and multiple-index models ................................ 107
  4.4 Empirical estimation ......................................... 110
    4.4.1 Estimation for the selection probabilities .................... 111
    4.4.2 Identifying the two components of wage variance .......... 111
    4.4.3 Separate identification for risk and unobserved heterogeneity ................................................................. 113
    4.4.4 Estimating the correction function .......................... 114
  4.5 The causal impact of risk on education ........................ 115
    4.5.1 Data ....................................................... 115
    4.5.2 Step 1: Schooling choice first stage estimates ............ 119
    4.5.3 Step 2: Corrected estimates for the returns on education 121
    4.5.4 Step 3: Point identification and bounds on wage variance parameters ......................................................... 123
  4.6 The effect of risk on educational choices ........................ 128
  4.7 Conclusions .................................................... 131
  4.8 College majors classification ................................... 132

5 Separating risk in education from heterogeneity: a semiparametric approach 139
  5.1 Introduction .................................................... 139
  5.2 Econometric specification ...................................... 141
    5.2.1 The model ................................................ 142
  5.3 Semiparametric estimation ..................................... 145
  5.4 Data ........................................................... 149
  5.5 Empirical results .............................................. 152
    5.5.1 Selection of the preferred model and first stage ........... 152
    5.5.2 Identification of selection correction term ............... 155
    5.5.3 Wage equation .......................................... 155
    5.5.4 Main results ............................................ 157
