You will be contacted as soon as possible.
# Contents

**Acknowledgements**  
3

1 **Introduction**  
1.1 Design constraints and trade-offs  
1.2 Current state of technology  
1.3 Platform-based design  
1.4 System-Level Design  
1.5 Navigating the design space  
1.6 Scope and contribution of this thesis  
1.7 Thesis layout  
9

2 **Daedalus: design flow**  
2.1 Introduction  
2.2 The Daedalus framework  
2.3 Parallelizing applications  
2.4 Design Space Exploration  
2.5 System-level Synthesis  
2.6 The Daedalus Design-flow Infrastructure  
2.7 Related Work  
2.8 Conclusion  
23

3 **Sesame: modeling and simulation**  
3.1 Introduction  
3.2 Overview  
3.2.1 The application model  
3.2.2 The architecture model  
3.2.3 Mapping  
3.3 Implementation Aspects  
3.3.1 Model specification  
3.3.2 The application model  
3.3.3 The architecture model  
3.3.4 The virtual/mapping modeling layer  
3.3.5 Graphical user-interface  
3.4 Setting up the Design Space  
33

## CONTENTS

3.5 Model and design space evaluation .................................. 54
3.6 Conclusion ................................................................. 56

### 4 Model calibration ......................................................... 57
4.1 Introduction ................................................................. 57
4.2 Model calibration .......................................................... 58
4.3 Off-line model calibration ............................................... 60
4.4 On-line trace calibration ................................................ 62
4.5 Trace calibration experiments ......................................... 65
4.6 Signature based model calibration .................................... 68
   4.6.1 Application requirements ......................................... 68
   4.6.2 Processor capacity and performance estimation ............. 70
4.7 Signature-based calibration experiments ............................ 71
   4.7.1 Related work ....................................................... 73
4.8 Conclusion ................................................................. 75

### 5 Multi-application modeling ............................................. 79
5.1 Introduction ................................................................. 79
5.2 Multi-application workload modeling ................................. 80
   5.2.1 Synthetic multi-application workload modeling ............. 80
   5.2.2 Realistic multi-application workload modeling ............. 83
5.3 Multi-application modeling: a designer's perspective .......... 84
5.4 Dynamic application behavior ...................................... 85
   5.4.1 Dynamic inter-application behavior ............................. 86
   5.4.2 Dynamic intra-application behavior ............................ 88
5.5 A preliminary case study ................................................ 90
5.6 Related work ............................................................. 91
5.7 Conclusion ................................................................. 93

### 6 Modeling dynamically reconfigurable systems ....................... 95
6.1 Introduction ................................................................. 95
6.2 Modeling dynamically reconfigurable systems ....................... 96
   6.2.1 Dynamic allocation of model components ..................... 96
   6.2.2 Resource management ............................................ 97
   6.2.3 Mapping strategy .................................................. 99
   6.2.4 Event trace clustering .......................................... 101
   6.2.5 Reconfiguration points .......................................... 103
6.3 The molen reconfigurable platform .................................. 104
6.4 Sesame molen model ..................................................... 105
   6.4.1 Mutual exclusion of GPP and RP ............................... 106
   6.4.2 Mapping strategies ............................................... 107
   6.4.3 Application pipelining .......................................... 108
   6.4.4 Component interaction .......................................... 109
