# Progression of multiple sclerosis: The role of microglia and neurons

Aletta van den Bosch

# **Progression of multiple sclerosis: The role of microglia and neurons**

A.M.R. van den Bosch

The studies described in this thesis were funded by Stichting MS Research and by MoveS. Financial support for publication of this thesis was kindly provided by Stichting MS Research and by the Graduate School of Neurosciences Amsterdam Rotterdam (ONWAR).

### **Cover design**

Charlotte van den Bosch ([charlottevandenbosch.com](http://charlottevandenbosch.com)). Front cover design illustrates the dynamic and intricate processes of lesion formation, expansion, and repair.

Progression of multiple sclerosis: The role of microglia and neurons

## ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor  
aan de Universiteit van Amsterdam  
op gezag van de Rector Magnificus  
prof. dr. ir. P.P.C.C. Verbeek

ten overstaan van een door het College voor Promoties ingestelde commissie,  
in het openbaar te verdedigen in de Agnietenkapel  
op donderdag 7 november 2024, te 10.00 uur

door Aletta Marthe Roswitha van den Bosch  
geboren te Boxmeer

***Promotiecommissie***

<i>Promotor:</i>	prof. dr. I. Huitinga	Universiteit van Amsterdam
<i>Copromotores:</i>	dr. J. Hamann dr. J.J.F.M. Smolders	Universiteit van Amsterdam Erasmus Universiteit Rotterdam
<i>Overige leden:</i>	prof. dr. P.J. Lucassen prof. dr. P. van der Valk prof. dr. B.M.J. Uitdehaag prof. dr. M.H.P. Kole dr. J. Mulder dr. M. Absinta	Universiteit van Amsterdam Vrije Universiteit Amsterdam Vrije Universiteit Amsterdam Universiteit Utrecht Karolinska Institutet Università Vita-Salute San Raffaele

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

"Nothing in life is to be feared, it is only to be understood.  
Now is the time to understand more, so that we may fear less"  
*Marie Curie*

## TABLE OF CONTENTS

Chapter 1:	Introduction and outline of the thesis	9
<b>Part 1: Loss of microglia homeostasis can lead to initiation of lesion formation</b>		25
Chapter 2:	Cortical CD200-CD200R and CD47-SIRP $\alpha$ expression is associated with multiple sclerosis pathology <i>Brain Communications. 2024 Aug; 6(4): fcae264</i>	27
Chapter 3:	Ultrastructural axon-myelin unit alterations in multiple sclerosis correlate with inflammation <i>Annals of Neurology. 2023 Apr; 93(4): 856-870</i>	53
Chapter 4:	Profiling of microglia nodules in multiple sclerosis reveals propensity for lesion formation <i>Nature Communications. 2024 Feb; 15(1): 1667</i>	79
<b>Part 2: Lesions with foamy microglia are expanding and lesions with ramified microglia are regenerative</b>		117
Chapter 5:	Disentangling the heterogeneity of multiple sclerosis through identification of independent neuropathological dimensions <i>Acta Neuropathologica, 2024 May; 147(1), 1-21</i>	119
Chapter 6:	Neurofilament light chain levels in multiple sclerosis correlate with lesions containing foamy macrophages and with acute axonal damage <i>Neurology: Neuroimmunology &amp; Neuroinflammation, 2022 Mar; 9(3): e1154</i>	157
Chapter 7:	Spatial transcriptomics reveals molecular mechanisms of smouldering lesion expansion in multiple sclerosis <i>In preparation</i>	181
<b>Part 3: Genetic susceptibility for clinical severity is associated with more severe pathology</b>		211
Chapter 8:	Multiple sclerosis severity-associated genetic locus exacerbates neuropathology <i>Adapted from: Nature, 2023, Jun; 628(8006): 195-203</i>	213
Chapter 9:	The progression-associated genetic variant in the DYSF–ZNF638 locus associates with increased neuronal loss and inflammation in multiple sclerosis <i>Submitted</i>	223
Chapter 10:	General discussion	253

Appendices:	English summary	278
	Nederlandse samenvatting	282
	Author contributions	287
	Curriculum Vitae	299
	Dankwoord	304
	About the author	310
