Acknowledgement

By bringing the research work of my Surgical Fellowship with Surgeons OverSeas together in a PhD I’m having the opportunity to think about all the people I met along the road and who have been essential in this process.

Directors of Surgeons OverSeas, Dr. Kingham and Dr. Kushner gave me the opportunity to develop this survey tool. Dear Peter and Adam I’m thankful for the opportunity and the faith you had in my capability to make this a useful exercise. Under guidance from them I was able to access the SOS membership and create a research group of a total of 46 members who helped with feedback on the development of SOSAS, the survey tool. There are too many names to mention, but the one who should be named is Dr. Petroze, PI for the SOSAS survey execution in Rwanda. Robin, although we were often not in the same continent, you feel like a close colleague in the field of surveying surgical diseases and capacity. Furthermore I would like to acknowledge Dr. Joharifard. Shahzad thanks again for teaching me the initial programming of the survey for iPad use: that was an awesome move which helped the project tremendously!

As stated in the discussion of the thesis, this research was not possible without the outstanding help and permission from colleagues in Sierra Leone. Dr. Kamara, dear TB thank you for hosting and brainstorming. It always feels like coming home when we arrive in the heat of Sierra Leone and eat together potato-leaves or better: cassava leaves! Your referral to Dr. Mohammed Samai was also very instrumental. Dear Dr. Samai, thank you for the trust you had in our research project and the good selection of nursing and medical students as enumerators.

The next thank you goes to the staff of Statistics Sierra Leone. Sahr Yambasu, Andrew A. Kamara and Andrew B. Johnney from Statistics Sierra Leone shared their expertise in surveying and gave specific insights in planning and logistics of surveying the population of Sierra Leone. Their knowledge and knowhow about the difficult terrain of Sierra Leone was incredible important for the planning and execution of the survey.

The enumerators and their supervisors were awesome; full of energy to walk when car-breaks occurred, laughed about their adventures on rivers (including mudslides), mountains and villages without electricity. Furthermore they worked as real teams and discussed the difficult medical situations they encountered during their interviews. I would like to mention them all, thank you: Michael M. Kamara, Lucina Bockarie, Cornelia P. Macculay, Regina Johnson, Adeeun Bangura, Michael A. Bangali, Salay Koroma, Mary M. Songu, Magdalene R. Kargbo, Alimamy D. Fornah, Joshua Hallie, Ale Vandy, Rebecca A. Yambus, Osman Sanu, Sylvia M. Mansaray, Kadie Kandeh, Victoria A. Koroma, Tity M. Koroma, Julianse S. Karama, and from the pilot study: Prince Williams.

During the execution we had a medical student over from Stanford University (now Dr. Stewart ☺️), she was able to concur Sierra Leone by traveling to the most difficult parts of the country and stay in villages without running water in order to assist one of the enumerators’ teams. Thank you Kerry-Ann!

After the pilot study of SOSAS during an incidental meeting at the KIT (Royal Tropical Institute) with Dr. Maldonado, we figured that this research could be part of a Master in International Health (MIH). Fernando, you were enthusiastic and had some additional good ideas and guided me in choosing additional courses on statistics and data management which improved the quality of the research. Dr. Blok, dear Lucie, you were essential with the review of the ethics protocol (IRB) and the feedback on my MIH thesis, a pillar for this current work. At the KIT Dr. Zwanniken, was imminent that I should take this research and other publications further into a Ph.D. Dear Priska, thank you for your encouragement and the connection with the University of Amsterdam!

Thank you co-authors, you were able to give good feedback, or sometimes just thumbs up. A special thank you goes to Laura Cassidy, since after multiple statistical attempts it was clear to me that higher statistical powers were needed. Laura you saved the project! And my co-author for life: Adam. I think that I’ve stated several times after different papers that this really was the last one together. We’ll see ☺️.

Without promoter, no promotion, Dear Prof. Dr. Borgdorff, dear Martien, thank you for your enthusiasm and creativity. It was a pleasure to work with you on this short but effective promotion, you were always quick in your return emails and available when I had a chance to visit Amsterdam. Also a special thanks to my co-promotor: Professor Hardy. Dear Mark, thank you for the thorough and detailed feedback on this exercise, however your enthusiasm goes beyond. Whenever we think about a new project or new places to visit we appreciate your enthusiasm, encouragement and understanding. I’m hopeful that they will continue.

For sure I’m not forgetting all my friends and family who are there if I happen to fly by for a quick visit, and always let me go. For most of you this Ph.D. project was invisible until now, but I hope it now makes sense in terms of where I was and why I always had a computer with me in my spare time. This thesis is more known to Thomas, my brother, who was always aware and interested in my work and publications. Our expertise is quite different, medicine versus ecology, but our desire to explore new fields and places has a lot in common. Thomas, thank you for being my parnymph.

Dear Adam you’re not only my para nymph on the day of oral defense for my thesis, but also my para nymph throughout this project. You instigated this project and were the best in letting me see the big picture when I worried too much about the details. And you made fun of me and said ‘you’re working on it as if this is a Ph.D. project’. I thought that was ridiculous. Adam: Ik hou van jou!
