Sol-gel transition in porous media

Interplay of drying and wetting

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor

aan de Universiteit van Amsterdam

op gezag van de Rector Magnificus

prof. dr. ir. P.P.C.C. Verbeek

ten overstaan van een door het College voor Promoties ingestelde commissie,

in het openbaar te verdedigen in de Aula der Universiteit

op woensdag 20 november 2024, te 14:00 uur

door Romane le Dizes

geboren te Marseille

Promotiecommissie

Promotor:	prof. dr. N.F. Shahidzadeh	Universiteit van Amsterdam
Copromotor:	dr. S. Jabbari-Farouji	Universiteit van Amsterdam
Overige leden:		
	prof. dr. J. Carmeliet	ETH Zürich
	dr. H. Derluyn	Université de Pau et des Pays de l'Adour
	prof. dr. F. Restagno	Université Paris-Saclay
	dr. A. Deblais	Universiteit van Amsterdam
	dr. J.A. Dijkstra	Universiteit van Amsterdam
	prof. dr. C.J.M van Rijn	Universiteit van Amsterdam
	prof. dr. K.P. Velikov	Universiteit van Amsterdam

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

'TO SEE A WORLD IN A GRAIN OF SAND'
WILLIAM BLAKE

Contents

1	INTRODUCTION	1
1.1	Motivation of this thesis	1
1.2	Silicate and organosilicate gels	4
1.2.1	Materials obtained using the sol-gel process	4
1.2.2	Hydrolysis and condensation	6
1.2.3	Gelation and aging	8
1.2.4	Swelling in gels driven by osmotic pressure	10
1.3	Wetting and drying in porous media	13
1.3.1	Properties and flow in porous materials	13
1.3.2	Wetting in porous media	16
1.3.3	Drying of water in porous media	19
1.3.4	Drying of complex fluids in porous media	26
1.4	Outline of the thesis	29
2	UNIDIRECTIONAL DRYING IN A ROUND CAPILLARY	31
2.1	Introduction	32
2.2	Methods	33
2.3	Results	35
2.3.1	Different drying regimes	35
2.3.2	Transition from constant evaporation rate to diffusive evaporation period	39
2.4	Discussion and conclusion	44
2.5	Appendix	45
3	SOL-GEL TRANSITION IN QUASI 2D MODEL POROUS MEDIA	51
3.1	Introduction	52
3.2	Methods	53
3.2.1	Preparation of the sol and description of the sol-gel process	53
3.2.2	Molecular rotors	54

3.2.3	Rheological measurements and calibration of the 4-DASPI during the sol-gel transition	55
3.2.4	Investigation of the sol-gel process in confinement using time-resolved confocal microscopy	56
3.2.5	Quasi 2D model porous media	58
3.3	Results	59
3.3.1	Linking lifetime of the probes with rheological properties	59
3.3.2	Round and square capillaries as model pores	60
3.3.3	Quasi 2D model porous media	64
3.4	Discussion and conclusion	67
3.5	Appendix	69
4	PNM FOR THE EVAPORATION OF COMPLEX FLUIDS IN POROUS MEDIA	75
4.1	Introduction	76
4.2	Methods	77
4.2.1	Description of pore network geometry	78
4.2.2	Isothermal drying algorithm	79
4.2.3	Building the pore network	86
4.3	Drying of water in porous media with different pores sizes	89
4.3.1	Effect of the pore sizes distribution	89
4.3.2	Comparison with experimental results	91
4.4	Sol-gel transition with evaporation	93
4.4.1	Implementing the heterogeneous increase of viscosity based on experimental results	94
4.4.2	Influence of viscosity gradient on the liquid flows	95
4.4.3	Influence of gelation on the drying kinetics	99
4.5	Discussion and conclusion	102
4.6	Appendix	104
5	SOL-GEL TRANSITION DURING DRYING IN SANDSTONES	109
5.1	Introduction	110
5.2	Methods	111
5.2.1	Preparation of the sol and description of the sol-gel process	111
5.2.2	Unidirectional drying experiments	112
5.2.3	NMR experiments	112
5.2.4	Computed X-ray microtomography	113

5.2.5	SEM	115
5.3	Results and Discussion	115
5.3.1	Drying kinetic during gel formation in porous media by NMR	115
5.3.2	Distribution of MTS determined by computed X-ray micro- tomography and SEM	117
5.3.3	Discussion on drying kinematics during sol-gel transition in porous media	120
5.4	Conclusion	123
5.5	Appendix	124
6	EXTREME SWELLING OF AMINOPROPYL SILANE IN POROUS MEDIA	129
6.1	Introduction	130
6.2	Methods	131
6.2.1	APS synthesis	131
6.2.2	Gel characterization	132
6.2.3	Macroscopic swelling of APS in stone samples	132
6.2.4	Microscopic swelling of confined gel bridge between two plates	134
6.3	Results	135
6.3.1	Swelling of APS in stones	135
6.3.2	Thin films of gel	138
6.3.3	Swelling behaviour of unconfined APS gel	143
6.4	Discussion and conclusion	148
6.5	Appendix	150
