David Feitse Boerwinkel was born and raised in the heart of the Netherlands: Utrecht. After his Gymnasium, he attended medical school at the Rijksuniversiteit Groningen, where he received his bachelor degree in 2007. This was preceded by an eye-opening research clerkship in Pediatric Gastroenterology with Prof. dr. Richard Grand, Harvard Medical School, Boston. As part of his clinical rotations in Heereveen, Curacao and the department of gastroenterology of St. Antonius Ziekenhuis, Nieuwegein, he was registered as MD.

Subsequently, he was given the opportunity to start a PhD research program with Prof. dr. Jacques Bergman at the department of Gastroenterology and Hepatology of the Academic Medical Center Amsterdam, which resulted in this thesis.

During his period in the AMC, David spent two months in the lab of Prof. dr. Rebecca Fitzgerald, Cambridge, UK. Furthermore, he coordinated a large, European collaborative project, together with the department of Biomedical Engineering and Physics of the AMC. For a joint research program with the Chinese Institute of Cancer, he spent time in China to help build the infrastructure for future projects. David has attended multiple national and international conferences, during which he presented many of the projects described in this thesis.

As of July 1st, 2013, he is a resident in training Internal Medicine at the Onze Lieve Vrouwe Gasthuis, Amsterdam, in preparation of his residency Gastroenterology at the Leiden University Medical Center.
