## Contents

1 Introduction 1
   1.1 The nebular hypothesis 2
   1.2 Observations of star formation 3
   1.3 Accretion: from cloud to star 6
   1.4 Jets and outflows 8
   1.5 Star formation towards higher masses 11
   1.6 Accretion variability 15
   1.7 Observations: the new generation 16
   1.8 This thesis 18

2 RCW 36: characterizing the outcome of massive star formation 21
   2.1 Introduction 23
   2.2 Observations and data reduction 27
   2.3 Results from photometry 30
   2.4 Results from spectroscopy 31
   2.5 The star formation history of RCW 36 44
   2.6 Conclusions 46
   2.A Classified sources in RCW 36 47

3 08576nr292: Discovery of a disk-jet system 55
   3.1 Introduction 57
   3.2 Observations and data reduction 58
   3.3 Results 59
   3.4 Discussion 62
   3.A X-shooter spectrum of 08576nr292 66

4 The outflow history of HH 1042 and HH 1043 71
   4.1 Introduction 73
   4.2 Observations and data reduction 75
   4.3 Analysis of the emission line spectra 76
   4.4 Physical properties of the jets 85
   4.5 Kinematics analysis 92
## Table of Contents

4.6 Discussion .................................................. 100  
4.7 Summary .................................................. 106  
4.A Additional materials ....................................... 108  

5 Relating jet structure to photometric variability: HD 163296 111  
5.1 Introduction .............................................. 113  
5.2 Observations, data reduction and archival data ............ 114  
5.3 Results: the jet .......................................... 117  
5.4 Results: variability of the central source .................. 128  
5.5 Discussion ................................................. 134  
5.6 Summary and Conclusions .................................. 140  
5.A Additional materials ....................................... 142  

6 First firm spectral classification of an early-B PMS star: B275 in M17 145  
6.1 Introduction .............................................. 147  
6.2 VLT/X-shooter observations of B275 ......................... 148  
6.3 Results .................................................... 149  
6.4 Discussion ................................................. 152  

7 A resolved, AU-scale gas disk around the B[e] star HD 50138 155  
7.1 Introduction .............................................. 156  
7.2 Observations and data reduction ............................ 158  
7.3 Results: spectroscopy ..................................... 160  
7.4 Results: AMBER interferometry ............................ 164  
7.5 Geometric modeling ....................................... 169  
7.6 Discussion ................................................. 175  
7.7 Summary and Conclusions .................................. 179  
7.A AMBER: observations ...................................... 181  
7.B AMBER: observations and models ......................... 182  
7.C Line visibility ............................................ 183  
7.D Visibility of a Gaussian distribution ....................... 184  

Bibliography ..................................................... 185  
Publications ..................................................... 199  
Summary ......................................................... 203  
Samenvatting ..................................................... 209  
Dankwoord ....................................................... 215
