## Contents

1 Introduction .............................. 1
   1.1 The nebular hypothesis .................... 2
   1.2 Observations of star formation ............ 3
   1.3 Accretion: from cloud to star ............ 6
   1.4 Jets and outflows ......................... 8
   1.5 Star formation towards higher masses .......... 11
   1.6 Accretion variability .................... 15
   1.7 Observations: the new generation ............ 16
   1.8 This thesis ................................. 18

2 RCW 36: characterizing the outcome of massive star formation 21
   2.1 Introduction ............................... 23
   2.2 Observations and data reduction .......... 27
   2.3 Results from photometry ................. 30
   2.4 Results from spectroscopy ............... 31
   2.5 The star formation history of RCW 36 .... 44
   2.6 Conclusions ................................ 46
   2.A Classified sources in RCW 36 ............ 47

3 08576nr292: Discovery of a disk-jet system 55
   3.1 Introduction ............................... 57
   3.2 Observations and data reduction .......... 58
   3.3 Results .................................... 59
   3.4 Discussion ................................ 62
   3.A X-shooter spectrum of 08576nr292 .......... 66

4 The outflow history of HH 1042 and HH 1043 71
   4.1 Introduction ................................ 73
   4.2 Observations and data reduction .......... 75
   4.3 Analysis of the emission line spectra ...... 76
   4.4 Physical properties of the jets .......... 85
   4.5 Kinematics analysis ........................ 92
5 Relating jet structure to photometric variability: HD 163296
  5.1 Introduction .................................................. 113
  5.2 Observations, data reduction and archival data ................. 114
  5.3 Results: the jet .............................................. 117
  5.4 Results: variability of the central source ..................... 128
  5.5 Discussion .................................................. 134
  5.6 Summary and Conclusions .................................... 140
  5.7 Additional materials ......................................... 142

6 First firm spectral classification of an early-B PMS star: B275 in M17
  6.1 Introduction .................................................. 147
  6.2 VLT/X-shooter observations of B275 .......................... 148
  6.3 Results ..................................................... 149
  6.4 Discussion .................................................. 152

7 A resolved, AU-scale gas disk around the B[e] star HD 50138
  7.1 Introduction .................................................. 156
  7.2 Observations and data reduction ............................... 158
  7.3 Results: spectroscopy ....................................... 160
  7.4 Results: AMBER interferometry ............................... 164
  7.5 Geometric modeling ......................................... 169
  7.6 Discussion .................................................. 175
  7.7 Summary and Conclusions .................................... 179
  7.8 AMBER: observations ........................................ 181
  7.9 AMBER: observations and models ............................ 182
  7.10 Line visibility ............................................... 183
  7.11 Visibility of a Gaussian distribution ....................... 184

Bibliography ......................................................... 185
Publications .......................................................... 199
Summary ............................................................. 203
Samenvatting .......................................................... 209
Dankwoord .............................................................. 215
