If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
Contents

1 Introduction
  1.1 The nebular hypothesis ..................................................... 2
  1.2 Observations of star formation ........................................... 3
  1.3 Accretion: from cloud to star ........................................... 6
  1.4 Jets and outflows ............................................................ 8
  1.5 Star formation towards higher masses ................................. 11
  1.6 Accretion variability ....................................................... 15
  1.7 Observations: the new generation ...................................... 16
  1.8 This thesis ................................................................. 18

2 RCW 36: characterizing the outcome of massive star formation 21
  2.1 Introduction ............................................................... 23
  2.2 Observations and data reduction ....................................... 27
  2.3 Results from photometry .................................................. 30
  2.4 Results from spectroscopy ............................................... 31
  2.5 The star formation history of RCW 36 ............................... 44
  2.6 Conclusions ............................................................... 46
  2.A Classified sources in RCW 36 ........................................... 47

3 08576nr292: Discovery of a disk-jet system 55
  3.1 Introduction ............................................................... 57
  3.2 Observations and data reduction ....................................... 58
  3.3 Results ................................................................. 59
  3.4 Discussion ............................................................... 62
  3.A X-shooter spectrum of 08576nr292 .................................. 66

4 The outflow history of HH 1042 and HH 1043 71
  4.1 Introduction ............................................................... 73
  4.2 Observations and data reduction ....................................... 75
  4.3 Analysis of the emission line spectra ................................ 76
  4.4 Physical properties of the jets ........................................ 85
  4.5 Kinematics analysis ..................................................... 92
