Disclaimer/Complaints regulations
If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: https://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
## Contents

1 **Introduction**  1
1.1 The nebular hypothesis  2
1.2 Observations of star formation  3
1.3 Accretion: from cloud to star  6
1.4 Jets and outflows  8
1.5 Star formation towards higher masses  11
1.6 Accretion variability  15
1.7 Observations: the new generation  16
1.8 This thesis  18

2 **RCW 36: characterizing the outcome of massive star formation**  21
2.1 Introduction  23
2.2 Observations and data reduction  27
2.3 Results from photometry  30
2.4 Results from spectroscopy  31
2.5 The star formation history of RCW 36  44
2.6 Conclusions  46
2.A Classified sources in RCW 36  47

3 **08576nr292: Discovery of a disk-jet system**  55
3.1 Introduction  57
3.2 Observations and data reduction  58
3.3 Results  59
3.4 Discussion  62
3.A X-shooter spectrum of 08576nr292  66

4 **The outflow history of HH 1042 and HH 1043**  71
4.1 Introduction  73
4.2 Observations and data reduction  75
4.3 Analysis of the emission line spectra  76
4.4 Physical properties of the jets  85
4.5 Kinematics analysis  92
## CONTENTS

4.6 Discussion ................................................. 100
4.7 Summary .................................................. 106
4.A Additional materials ................................. 108

5 Relating jet structure to photometric variability: HD 163296 111
  5.1 Introduction ............................................. 113
  5.2 Observations, data reduction and archival data ...... 114
  5.3 Results: the jet .......................................... 117
  5.4 Results: variability of the central source ............ 128
  5.5 Discussion ............................................... 134
  5.6 Summary and Conclusions .............................. 140
  5.A Additional materials ............................... 142

6 First firm spectral classification of an early-B PMS star: B275 in M17 145
  6.1 Introduction ............................................. 147
  6.2 VLT/X-shooter observations of B275 .................. 148
  6.3 Results .................................................. 149
  6.4 Discussion ............................................... 152

7 A resolved, AU-scale gas disk around the B[e] star HD 50138 155
  7.1 Introduction ............................................. 156
  7.2 Observations and data reduction ...................... 158
  7.3 Results: spectroscopy .................................... 160
  7.4 Results: AMBER interferometry ....................... 164
  7.5 Geometric modeling ..................................... 169
  7.6 Discussion ............................................... 175
  7.7 Summary and Conclusions .............................. 179
  7.A AMBER: observations ................................. 181
  7.B AMBER: observations and models .................... 182
  7.C Line visibility .......................................... 183
  7.D Visibility of a Gaussian distribution ............... 184

Bibliography .................................................. 185
Publications .................................................. 199
Summary ...................................................... 203
Samenvatting ................................................. 209
Dankwoord ..................................................... 215
