ACKNOWLEDGEMENTS

I would like to commence this acknowledgment with my appreciation to the Chinese government, who awarded me a scholarship under the State Scholarship Fund, managed by the China Scholarship Council, to support my PhD study at ACTA in the Netherlands. Over the course of the past four years, the names and faces of the people I worked with at ACTA evolved from foreign and part of a culture shock to being deeply memorized in my heart. It is their warmth and generous willingness to help that made the difficulties and challenges in my study into a tremendous wealth in my future life. Without their support, I would not have been able to finish this thesis. Therefore, I would like to take this opportunity to express my gratitude to all of them.

First of all, I would like to sincerely acknowledge my promotor, Prof. Dr. Albert Feilzer. I will always be grateful to him for accepting me as one of his PhD students. His kindness, professionalism, enormous achievement in the academic field and constructive advice differentiated him from other promotors. I am honored to have his guidance on the doctorial path.

I would also like to express my deep gratitude to my co-promotor Dr. Cees Kleverlaan. I can still remember the first day I arrived at ACTA and how much I was shocked to be offered to call him Cees, instead of Dr. Kleverlaan. Dear Cees, thank you for your invaluable comments, suggestions and encouragements throughout my study. Thank you for your precious time and apologies for many disruptions when I suddenly needed your advice. Thank you so much to guide me to become an independent researcher that I am today. Your words ‘just do it’ will always be in my mind.

I also want to show my acknowledgement to Prof. dr. M. Özcan, Prof. dr. F.J.M. Roeters, Prof. dr. D. Wismeyer, and Dr. C. Kreulen, the members of the reading committee, for evaluating my thesis. Special thanks to Prof. Roeters, who read my manuscript very carefully and provided detailed and constructive comments. I would also like to thank them for participating in the promotion.

Another appreciation goes to Arie Werner and Jacqueline Rezende, who helped me enormously with the SEM, sawing, sandblasting, universal testing machine and everything else that I needed in the lab. I would also like to express my acknowledgement to Dr. Niek de Jager for patiently helping me with the FEA study.

Next I would like to devote some time to appreciate the ‘material girls’! Whenever I think about my life in ACTA, I will think about you. I can still remember the moment in my first IOT meeting in 2010, when we won the prize for the quiz at
PhD lunch. That was the first time we were called the ‘material girls’. I will always be proud of you, and be proud of us! Although we started in a quite small group, now it’s getting bigger and bigger. To appreciate the days we spent together, I would like to give a shout out of your names: Leontine, Ghazal, Ana Milheiro, Houda, Jessica, Ana Lourenço, Flávia, Francis, Lilian, Şaziye, and Clarissa.

Dear Ghazal and Ana, words cannot express my gratitude to you. Please support me as you’ve always been doing during my promotion and prepare for the reception afterwards. Thank you so much to be my paranymphs.

My acknowledgement goes also to Dr. Prem Pallav, who really helped me a lot in the first year of my PhD study. I will always remember him at heart.

I owe an appreciation to Alma, who is like a big sister to me. I admire you for your tenderness and forever friendship.

I also wish to thank other lovely colleagues in the Department of Dental Materials Science: Tineke, Klaas, Sylvia, Anne, Joris, Ruud, René, Nils, Paul… Because of you, the department really is an amazingly relaxing scientific world.

I am also very grateful to all my other friends in ACTA. To Maria and Dongmei, thank you for your geniality and scientific guidance. To Jing and Yan, you are not only my classmates in China but also my best friends here; I’m so glad that we carried our friendship from China to the Netherlands. To Leimeng, Lei, Gang, Tie, Dongyun, Xiao, Xingnan, Xuelian, Min, Libang, Hong, Bao, Zeng, …, thank you for your friendship and I will always remember the parties we had together.

A special appreciation goes to Abby, I would say it’s a miracle to meet you here, in Amsterdam. We are from the same city, we were born on the same day, and you always know what I want to say. Thank you.

I would like to take the opportunity to express my sincere acknowledgement to Prof. Dr. Zhimin Zhu, because of your supports and encouragements, I had the chance to pursue my PhD in Amsterdam. I would also like to acknowledge Dr. Hang Wang, who recommended me to ACTA. I also appreciated all my friends in China who supported me a lot through my pursuit of the degree.

I also want to offer a deep gratitude to my parents. Baba and Mama, words are too weak to express how much I appreciate you. I am so grateful to both of you, for being understanding and supportive. Your endless and unconditional love always makes me stronger. You are my dearest and truest friends and I will cherish you forever.

Wen, although you said it’s not necessary, I still wish to show my appreciation to you, my best friend and my better half. Thank you for standing by my side and
cheering me up when I feel depressed, and for your encouragement which gives me strength and makes me more confident. You know you are the one I dreamed to have in my life.

Thanks again to all the people who help and love me. You made me know that pursuing for PhD is not only for the philosophy in the scientific world, but also for the philosophy in life.
