The studies described in this thesis were carried out at the department of Molecular Biology and Microbial Food Safety of the Swammerdam Institute for Life Sciences at the University of Amsterdam and the Tytgat Institute for Liver and Intestinal Research of the Amsterdam UMC.

Microbes in the inflamed gut

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus,
prof. dr. ir. P.P.C.C. Verbeek,
on the account of the decision of the doctorate board,
in het openbaar te verdedigen in de Agnietenkapel
op donderdag 5 december 2024, te 16.00 uur

door Nienke Koopman
geboren te Hoogeveen

Table of contents

Part I Interactions between microbiota and host in inflammatory bowel disease

Chapter 1	12
General introduction and outline of this thesis	
Chapter 2	30
Integrated multi-omics of feces, plasma and urine in pediatric Crohn's Disease is able to detect and connect metabolites, proteins and microbes that differentiate between active disease and remission	
Chapter 3	76
Multi-compartment metabolomics and microbiomics reveals urine metabolome as most discriminative for disease activity in pediatric ulcerative colitis	
Chapter 4	104
The multifaceted role of serotonin in intestinal homeostasis	

Part II Sporobiota in the gut in health and disease

Chapter 5	152
Mechanisms and applications of bacterial sporulation and germination in the intestine	
Chapter 6	204
Metagenomics derived sporulation potential to predict the presence of spores in the healthy and diseased gut	
Chapter 7	234
History of fecal transplantation; camel feces contains limited amounts of <i>Bacillus subtilis</i> spores and likely has no traditional role in the treatment of dysentery	
Chapter 8	250
Discussion and perspectives
