Disclaimer/Complaints regulations
If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
Contents

1 Introduction ........................................... 3
  1.1 Knots ........................................... 3
    1.1.1 How to distinguish knots ...................... 3
    1.1.2 The problem of classification ................. 6
    1.1.3 Knot invariants .............................. 9
    1.1.4 Relation with Quantum Field Theory .......... 12
  1.2 Main results ..................................... 14
  1.3 Acknowledgments .................................... 16

2 Relation between HOMFLY polynomials and Hurwitz numbers 17
  2.1 Hurwitz theory .................................... 17
    2.1.1 Hurwitz partition function ................. 19
    2.1.2 Cut-and-join operators ..................... 20
  2.2 Shifted symmetric functions ....................... 20
    2.2.1 From Hurwitz to KP partition functions and renormalization group .......... 22
  2.3 HOMFLY polynomials ................................ 23
    2.3.1 Chern-Simons approach ...................... 23
  2.4 Large $N$ expansion ................................ 25
    2.4.1 HOMFLY polynomial as a $W$-transform of the character .......... 27
    2.4.2 Ooguri-Vafa partition function as a Hurwitz tau-function .......... 29
    2.4.3 Linear vs non-linear evolution ............... 32
    2.4.4 Hurwitz tau-function via Casimir operators .......... 32
    2.4.5 Large $N$ expansion via Casimir operators .......... 33
    2.4.6 Large-$R$ behavior .......................... 33
    2.4.7 Large $N$ expansion for knot polynomials vs Takasaki-Takebe expansion .......... 34

3 Kontsevich integral .................................. 36
  3.1 Knot invariants from Chern-Simons theory .......... 36
    3.1.1 Physical interpretation ..................... 38
  3.2 Localization of Kontsevich Integral .............. 41
    3.2.1 Multiplicativity and braid representation ........ 41
    3.2.2 Choice of associators placement ............. 44
    3.2.3 Formulas for R-Matrices and associators .......... 46
    3.2.4 Caps ........................................ 47
