You will be contacted as soon as possible.
### Contents

1 Introduction .......................... 1
   1.1 Active galactic nuclei ................. 1
       1.1.1 Effect of AGN on galaxy evolution ........... 3
       1.1.2 AGN classes ............................ 3
       1.1.3 Unification through orientation ............... 4
       1.1.4 Intrinsic differences ...................... 5
   1.2 Black hole X-ray binaries ............. 5
       1.2.1 Accretion states ......................... 5
   1.3 Mapping of AGN classes onto BHXRB accretion states .......... 7
   1.4 Accretion discs ........................... 10
   1.5 Jets ..................................... 13
       1.5.1 Observations of jets ....................... 13
       1.5.2 Theoretical models of jets .................. 16
   1.6 Spectral fitting .......................... 18
   1.7 This thesis ............................. 20

2 Background and Methodology ............. 23
   2.1 History ................................ 23
       2.1.1 Non-relativistic spherically symmetric HD wind ........ 24
       2.1.2 Non-relativistic cold cylindrically symmetric MHD wind .... 26
       2.1.3 Relativistic cold cylindrically symmetric MHD wind .......... 30
       2.1.4 Non-relativistic warm cylindrically symmetric MHD wind ...... 31
       2.1.5 Relativistic warm cylindrically symmetric MHD wind ........ 32
2.2 Extending the model ........................................... 33
2.2.1 Non-relativistic wind model with gravity .................. 34
2.2.2 Relativistic wind model without gravity .................... 37
2.2.3 The Alfvén Regularity Condition .......................... 43
2.2.4 The kinetic gravity term ................................... 45
2.2.5 The full gravity term ...................................... 46
2.3 Numerical method for finding solutions ....................... 52
2.3.1 Initial setup ............................................. 53
2.3.2 Integration step .......................................... 53
2.3.3 Iteration towards a solution ............................... 54

3 Determining the optimal locations for shock acceleration in magnetohydrodynamical jets 57
3.1 Introduction .................................................. 57
3.2 Method ...................................................... 59
3.2.1 Background .............................................. 59
3.2.2 Model Parameters ....................................... 61
3.2.3 Numerical Method ....................................... 64
3.2.4 Approach ............................................... 64
3.3 Results ...................................................... 66
3.3.1 Solution a: A Cold, Slow Jet ............................... 66
3.3.2 Solution b: A Cold, Fast Jet ............................... 68
3.3.3 Solution c: A Warm, Very Fast Jet ....................... 68
3.3.4 Location of the MFP ..................................... 68
3.4 Discussion ................................................... 69
3.5 Conclusion ................................................... 70
3.A Equations .................................................. 70

4 Linking accretion flow and particle acceleration in jets. I. New relativistic magnetohydrodynamical jet solutions including gravity 73
4.1 Introduction .................................................. 74
4.2 Method ...................................................... 77
4.2.1 A physical description of the flow ......................... 78
4.2.2 A new solution technique: the C∞-continuous bridging method 78
4.2.3 The basic C∞-continuous method ......................... 79
4.2.4 The effects of including gravity on the solutions .......... 81
4.2.5 Model parameters ....................................... 82
4.3 Results ...................................................... 83
4.3.1 First solution ........................................... 83
4.3.2 An initial exploration of parameter space ................ 85
