Disclaimer/Complaints regulations
If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
# Contents

## 1 Introduction

1.1 Multiscale applications .................................................. 3
1.2 Theory of multiscale modelling and computing ...................... 7
1.3 Multiscale computing ..................................................... 12
1.4 Distributed multiscale computing ..................................... 16
1.5 Outline of this thesis .................................................... 17

## 2 Theory of distributed multiscale computing

2.1 Introduction ................................................................. 20
2.1.1 Related work .......................................................... 22
2.2 Multiscale modelling formalisation .................................... 23
2.2.1 Process ................................................................. 25
2.2.2 Scale separation ..................................................... 28
2.2.3 Multiscale model and single scale models ....................... 30
2.2.4 Scale separation map ................................................ 32
2.2.5 Submodel Execution Loop ......................................... 33
2.2.6 Coupling templates ................................................ 37
2.2.7 Coupling topology .................................................. 39
2.3 Specifying a multiscale model ......................................... 41
2.3.1 Computational elements in MML .................................. 42
2.3.2 Graphical MML ...................................................... 44
2.3.3 XML format of MML ................................................ 46
2.4 Multiscale model analysis ................................................. 49
2.4.1 Coupling topology: deduction and implications ............... 50
2.4.2 Predicting runtime behaviour with a task graph ............... 50
2.4.3 Task graph reduction ................................................ 57
2.5 Distributed multiscale execution ....................................... 60
