The last “opdracht” of this Thesis is a truly pleasurable one: to express gratitude to the many people who each contributed such important pieces to the Work as it stands now.

The first thanks traditionally go out to the Promotor, and that is especially fitting for this Thesis. I would like to thank Prof. Markus Hollmann for welcoming me into the Department of Anesthesiology at the Academic Medical Center (AMC), and for giving me so much inspiration, support and liberty on my Academic path. My second gratitude is expressed to my Department Chair Prof. Wolfgang Schlack, for giving me the opportunity to come to the AMC, and for having the vision that Amsterdam would be a good place for my family and me. Thank you so much. It is.

To the two co-promotores on this Thesis, Nina Hauck-Weber and Markus Stevens, I would like to express my gratitude for their enormous and invaluable support in all things laboratory, experimental, academic and Dutch. Their advice and knowledge of Holland, Amsterdam and the AMC contributed greatly to making the start back in 2010 a very positive and rewarding one.

I would like to thank all the members of the Graduation Committee, Prof. Wolfgang Schlack, Prof. Ivo van Schaik, Prof. Marcus Schultz, Prof. Peter Gerner, Prof. Jim Rathmell, dr. Geert-Jan van Geffen, and Dr. Lukas Kirchmair, for their willingness to grade the Thesis, and to come to the Agnietenkapel on June 11th 2014 to enter into an academic discussion.

This work has been the product of a fruitful and productive collaboration with many creative, diligent and at the same time “gezellig” colleagues from different disciplines, Universities and countries. The research leading up to this thesis was conducted in Innsbruck, and I am still grateful for all the support given to me by the Dept. of Anesthesiology and Critical Care Medicine, Innsbruck Medical University, especially by Volker Wenzel, Arnulf Benzer, Guenther Putz, Gottfried Mitterschiffthaler and Christian Keller. Furthermore, I am grateful to Ingrid Haller, Lars Klimaschewski and Barbara Hausott for their help and support on our studies on Local-anesthetic-induced neurotoxicity. At the AMC, I would like to express my thanks to Ivo van Schaik and Camiel Verhamme at the Dept. of Neurology, who introduced me to the Neurophysiology of the Primary Sensory Neuron and Diabetic
Neuropathy, and thereby laid the groundwork for hopefully many interesting Regional Anesthesia projects to come. My thanks go out to Heidelinde Fiegl, Innsbruck Medical University, and Martin Widschwendter, University College London, for introducing me to the fascinating world of Epigenetics.

Along my academic career, I have been fortunate to encounter colleagues who have influenced and inspired me. Among them, I would especially thank Peter Gerner, Jim Rathmell and Quinn Hogan for being such exemplary role models as Clinician Scientists and in the care they afford to their patients.

I am grateful to John McDonough and Juergen Osterbrink for giving me insight into the discipline of Nurse anesthesia, for our many creative and fruitful discussions, and the good collaboration on our mutual projects.

To my good friends Lukas Kirchmair and Josef Rieder (in alphabetical order), I am grateful for your friendship and for our many common steps in Research, in Anesthesia, and as friends.

Coming to Amsterdam also led to a wonderful collaboration with Susanne Picardi at the University Hospital in Heidelberg. My gratitude for our interesting mutual projects is linked to the hope that we will collaborate on many topics surrounding local anesthetics in the years to come.

My two “paranimfen”, Holger Baumann and Jan Eshuis, I am grateful for your support even from before the first day in Amsterdam, and that you will be at my side on this important day.

Any good anesthesia department needs a well-balanced mix of clinicians, clinician-scientists and scientists. I think that our Department of Anaesthesiology fits this description very very well and I am grateful to be working in such a supporting and supportive environment.

Moving to Amsterdam almost four years ago was, naturally, a life event for my family and me, but our arrival was facilitated and soothed by incountable colleagues and friends who helped, supported, listened, gave advice, and made us feel welcome. Hartelijk bedankt voor jullie steun en hulp.

The famous last words and words of gratitude belong to my family. Specifically, I would like to thank my parents for supporting me all my life and for affording me the liberty to pursue the study of my dreams, Medicine. Most importantly, I would love to thank you, Petra, for our wonderful life together, and you, Ferdinand and Leopold, for being such wonderful sons. Without you three (all being well soon to be four), this Thesis would not be here, and that is literally the case from front-page art to this very last page. And even if something was there, without you it would not make sense. Ich liebe Euch, sehr sehr.
