Acknowledgments

Most of the studies in this thesis were supported by INTERACT program sponsored by WOTRO. It would have been very difficult to complete this work without the support of the dedicated team that I was blessed to have in all the stages and I would like to thank you all, most of you we have become good friends even after.

I would like also to thank the health facilities and staff where we conducted our studies and the INTERACT team for all the support and guidance. In this work, I have learnt that for any activity we see being done, a lot more has been done in the mind long before, and this is the difficult part in my opinion. I have met many people on the way who helped me in different ways and I sincerely appreciate, without your support this wouldn’t be possible.

I was blessed to meet experienced people whose valuable ideas and discussions resulted in this, here I will mention few:

Prof Joep Lange; As principal investigator of INTERACT for the support and all the guidance and especially in his very busy schedule to avail time for me as promotor and providing all the support and guidance to achieve this, I sincerely thank you.

Dr Peter J De Vries; I still remember the first days of conceiving research ideas when everything was misty for me, the inspiring discussions and guidance was always enriching.

Your friendly support, critical review and teaching have been the key for me to keep going and balance clinical medicine and research. You have not only been a mentor but also now a good friend, you have opened your home for me, this thesis wouldn’t be what it is without you.

Dr. Petra. Mens; Thank you for your support and guidance, throughout this work, you always brought me back whenever I slowed down the pace and taken over by my other clinical and teaching obligations; even after your scientific help you have helped to put together all the pieces including Dutch translation.
Adriana Tami who we moved together with Peter around the Country thinking about site selection and conceptualizing ideas, she was very kind and educative.

Dr Henk Schallig, thank you for your guidance, your valuable advice broadened my understanding of malaria in pregnancy especially at parasite level and resistance patterns, this reasoning has helped me to think out of a box, even now as a clinician. You spent your time to critically review our manuscript and your comments were always enriching.

I was also blessed to meet people like Prof Frank Cobelens, expert in tuberculosis but always spent time to critically review my work and provided valuable inputs, I learnt a lot of epidemiology from him.

Prof. Dr. Nico Nagelkerke of United Arab Emirates University, Faculty of Medicine & Health Sciences, Department of Community Medicine, Al Ain, United Arab Emirates) with his simplistic way of explaining difficult statistics and always willing to help me whenever I needed him was always reassuring as walking on the shoulder of giants.

Being a member of malaria in pregnancy consortium has also exposed me to immesurable knowledge from different experts and meet nice and educative people like Prof Feiko ter Kuile of London School of Hygiene and Tropical Medicine. Feiko showed interest in what I was doing from the first day we met, and discussing with him was always educative and was always supportive.

INTERACT office in Kigali was a centre and the engine for all the work, with moral and logistical support, behind these activities was Andrew Musemakweri whose humor and energy always kept us going, thank you Andrew for all the support.

Kimberly Boer was also a permanent resource whenever I needed her help.

Data collection from the field is a tough job but quality data is only done by a self-motivated and dedicated team, this is what I was blessed with, I thank you ‘project H’ for the great job, without you, this work wouldn’t be what it is.

They include among others Dr Agaba Steven, Nadine Kaligirwa, Placide Karangayire & Karangwa Bosco, thank you for your sleepless nights especially during pharmacokinetics and ultrasound
studies, where you worked around the clock to meet blood sampling procedures, you endured my calls even at wrong hours to clarify some tiny questions in a CRF even long after the study was completed.

This thesis is a product of a long journey, the road was not straight and sometimes rough!, God has however been with me all through.

Finally, I would like to acknowledge my family for the support and encouragement. They have been the cornerstone in supporting me to complete this work especially my wife Alice and children Sammy, Ketsia, Joshua and Joanna; you are the reason why I keep going.

God bless you all abundantly as he has been to me

Kigali  2014      Stephen Rulisa
