My thanks go out to many people. I would like to express my gratitude especially to my promotor Richard Ridderinkhof. Thank you for your enthusiastic guidance, your open view, countless insightful comments and edits, and for your outstanding generous and loyal support. Through your steady support and trust I was able to develop my interest in many intriguing aspects of neuroscience and psychology, not only in research and in teaching but also on my way to the clinical field. Thank you for creating this rich scientific and social environment with the Acacia group, and for sending me to wonderful courses, conferences and swimming pools abroad.

I am indebted to Mike Cohen, without whose knowledgeable skills in inventing and providing FSL and pupil analysis tools, this thesis would not have been possible. Thanks also for your careful edits and cheery smile.

My gratitude goes out to the participants of my studies. They contributed the most essential ingredient to this thesis. Thank you for investing this high amount of time and effort in the long screening and scanning trajectories.

I would like to thank the members of the reading committee, Prof. Maurits van der Molen, Prof. Ben Schmand, Prof. Hilde Geurts, Prof. Erik Scherder, Prof. Sander Nieuwenhuis and Dr. Redmond O'Connell for spending their time and effort on reading the thesis, and opposing at the defense.

Thanks to members of the Developmental Psychology department. I learned a lot from the discussions during the department meetings- and uitjes and next to the coffee machine. Special thanks to Maurits, Wery, Verena, Wouter, Riek, Margot, Tessa, Ellen, and all the other colleagues who made that OP was such a nice department to work at.

Thanks to all ACACia's and ACACIA alumnies Sanne K., Marijke, Jasper Wij., Sanne de W., Dorothy, Birte for her thoughtful advice and help, Wery for his kind and insightful support, Mike, Mirre, Irene, Simon, Dilene, Hilde, Jessika, David, Anna, Stephen W., Stephen B, Nick and Tim for providing indispensable JAVA help, Jasper Win and Sara. Special thanks to my office mates Sanne K., Marijke, Jasper and Bregtje for the very pleasant company.

Dear Marijke and Sanne d W., I am delighted that you are my paranimfs, and that we became friends along the ACACIA adventure. Marijke, my long-term office mate, who I was happy to retrieve every morning somewhere underneath some giant jungle plant, and who I have been lucky enough to have had travelling this same journey alongside me with her wise advice and optimism. Sanne not only sketches the most fabulous “you go girl” postcards, but significantly enhanced the colour of lots of my PhD (et autres) activities in many roles and disguises. I am lucky to have such enchanting and loyal friends.

A big thank goes to Dorothy, who’s sense of humor and exploration is inspiring, and who generously offered me both a place in her office and her apartment in a nerve-stretching period of the thesis.

This project would not have been possible without the help of Marcus Spaan, Bert Molenkamp, Nico Notenbaart, Rene van de Belt and Patrick Knight of the TOP department. You’ve been excellent masters in technical setups and eye-track-presentation feedback systems, data-storage and above all in reanimating the MRI-eyetracker through endless emergency welding, crash-tests and creative tape solutions. I moreover like to thank again Marcus and Michel for your excellent support with the ever changing linux computers. No matter what level of temperature,
high water and neurosis you encountered in the Linux room, you kept ensuring that the data did not get lost along the way (Did I really saw you marching through high water towards this flash flood waterfall above the linux PCs?) The fact you were willing to put up patiently with my Bavarian dress culture for one of the labmeeting presentations remains the absolute highlight for me.

Thanks to all the students (now allumnies) for the pleasure to work with you along the years. I really like teaching, and this is sure due to the uva and Richard, who gave me many opportunities. Special thanks go to Renee for the inspiring collaboration, Hilko, Maria, Elian, Anna, Nick, Stephen, Ryszard, Caslav, Jessika and Tim who helped me in collecting and evaluating the data of the eyetracking studies.

Along the way there were many people who I would like to thank for their support:

Corry and Harry Burgers. I am indebted to your help during my first steps in the Netherlands. When I got to know you in a park, you not only invited me to a tomatosoup in your garden, but also supported me generously with Dutch-study books, exercise tapes and tape-recorders, corrected by first Dutch text, and kept encouraging me. I am immensely lucky to have met so warm, honourable and considerate people.

Rolf Engel and Norberth Kathmann of the psychiatric LMU clinic, whose craft ship and teaching in neuropsychological testing and eyetracking had a lasting effect. I am sure I wouldn’t have ended up here without them. Rasha Abdel Rahman in the MPI Nijmegen who introduced me to electrophysiology, and Gabriele Janzen in the Donders Centre who introduced me to fMRI. Michael Czisch and Thomas Wetter from the MPI in Munich for being able to work in their simultaneous neuroimaging projects. My housemates in Munich Matthias and Joerg and Jessika for the fantastic time under the wooden roof above the bakery, the homy kitchen, Brotzeitbrettl, Leberwurscht, and your super company.

Liesbeth Reneman from the radiology department of in the AMC for the pleasant cooperation, for the radiological screening of the brainscans, and organizing the x-rays. Aart Nederveen for giving me the opportunity to learn to operate the scanner in the AMC. Sandra and Rachelle for answering my countless MRI-implant questions.

Pauline Spaan for kindly providing the computerized version of the adjusted Raven for senior studies.

Steven Scholte for putting immense work in the FSL-computers at the UvA. Tessa and Hagar for assisting with lots of scans in the AMC. Poppy for the cheeful (and so productive!) scan-sundays at the AMC.

The Zonnehuis colleagues. With your inspiring and knowledgeable work you consolidated my interest in rehabilitation and health care, that I will have a hard time getting rid off. Thank you Hans for your trust and supportive guidance. I learned a lot from Milly, Aram, Maeike, Annemarie, Anton, Jordy, Romy and Jan, and am grateful to for the super time in de kantoortuin.

Arjan, Danielle, Margreeth, Marjan and Christa and the enthusiastic ergotherapy-team for the inspiring and pleasant colleagueship in the neuro-revalidation.

The Nieuw Unicum colleagues. What made writing up my thesis great is of course working along the seaside, but most of all working alongside this fabulous team: Liesbeth, Neeltje, Saskia, Fred,
Irene, Myrthe, Caroline, Pauline, Johan, Laura, Magdaleen, Job, Hector, Esther, Claudia, Joke, Corina, Nelleke, Lida and Gery. Thank you for all the help and inspiration, and the pleasure we have. A special thank to Saskia for her work-and moral support, and to Neeltje and her husband Jannes for taking the time even during Easter and Koningsdag to help me with the cover of the thesis.

Doris, Anke and Julia. I am so grateful that our friendship is like it has been at school, and hope of course that it will last another 25 years. My dear friends from Nijmegen, Boukje and Patrick, Robin, Meike and Oliver, Christian and Carmen, Nils, Bregje, Philipp, Paula, Ina, Jana and Jule for the great Nijmegen memories, the wonderful trips, and above all for your friendship.

Ex-housemates in the woongoep “crisis” Bregje, Chris, Enrico, Ji-Hae, Key, Orestes, Klaas-Pier, Sven, Cristi and Melanja. Although I have been absent a lot in the last period, I very much enjoyed your company, the inspiring artistic house-attributes, the sunny balcony conversations, and of course the massages and the yoga classes.

Jasper’s family for welcoming me so kindly, the warmth in your company, and for all the lively family encounters – squirrel walks with Regi and Marco, and Lisls and Martins’ feestelijk Christmas in the Plantage buurt:- Thank you Regi, Marco, Martin, Lisl, Michel, Fleur, Jonathan, Senne, Friso, Willemijn, Maxine, Andries, Ineke, Hugo and Sophieke.

Thank you very much super family: Aunt Emma, Uncle Laszlo, Ingrid, Karine, Alex, Laurent, Kevin, Vicky and Rafi, late Uncle Mik, Ervin, Otto, Hilde, Kristin, Marie, Hermann, Joergen, Margit and Helga, my Norwegian name patron. A special thanks to my Aunt Emma, Uncle Laci, and Uncle Mik for your lessons on courage and for your warm support, full of energy and generosity. The visits to you in Switzerland and Norway during my thesis have been, as always milestones and sources of countless photo’s on my desk, next to aunt Emma’s encouraging cards, and the clever “ready to jump” new year’s eve foto-wishes of the Pingou and Muropulo family. I am truly delighted that we can celebrate the defense together, and with Uncle Miks sons and their families. Thank you Tante Erika for your kindness, support and thoughtfulness. Thank you Christian, Andi and your wives, Andras, Mari and Daniel for your support, and for the joyful family meetings.

But the support I have leaned on, quite possibly the most, comes from my parents. You help me on so many levels. Dear Mama and Papa, always caring and curious about what I think an how I am, always there, best analytics, and steady provider of much appreciated sausage-, cake-, and newspaper-highlight-parcels, I am deeply grateful to you, you are supreme!

And I want to thank Jasper, who supported me and this thesis in so many different ways. Besides having been a great ACACIA- and office mate, you are co-author of the work in this thesis and proof read my texts. You have been throughout a refreshing natuurjong, and fantastic chef du cuisine during periods of long work days/ nights. You have been luckily inventive in finding ways of distraction, and once again you allow me to occupy your dear broad band computer to write these words. Thank you because you make me so happy.
