Contents

Preface	9
Summary	13
Samenvatting	17
Zusammenfassung	21
1 General introduction	27
1.1 Digital terrain analysis and geomorphometry	28
1.1.1 LiDAR data and processing	28
1.1.2 DEMs and Land Surface Parameters	29
1.1.3 Automated extraction of geomorphological features	29
1.2 Object-Based Image Analysis	30
1.3 Dynamic modeling of geomorphological processes	32
1.4 Research objectives and structure of this thesis	33
1.5 Study area	33
2 Segmentation optimization and stratified object-based analysis for semi-automated geomorphological mapping	37
2.1 Introduction	38
2.2 Study area	39
2.3 LiDAR data acquisition and processing	40
2.4 Methods	40
2.4.1 Data preparation	41
2.4.2 Parametrization	42
2.4.3 Stratified feature extraction	44
2.4.4 Validation	44
2.5 Results	44
2.5.1 Segmentation parametrization	45
2.5.2 Classification results	45
2.6 Discussion	45
2.6.1 RGB composite	45
2.6.2 Segmentation Accuracy Assessment	47
2.6.3 Stratified feature extraction	49
2.7 Conclusions	51

3	A protocol for digital geomorphological mapping in mountainous areas	53
3.1	Introduction	54
3.2	Study area	56
3.3	Data & Methods	58
3.3.1	Data sources	58
3.3.2	Digital geomorphological mapping of representative areas	59
3.3.3	Object-based digital terrain analysis	60
3.3.4	Software	64
3.4	Results & Discussion	65
3.4.1	Segmentation optimization	65
3.4.2	Automated development of classification rules	66
3.4.3	Classification results	67
3.4.4	A protocol on digital geomorphological mapping	68
3.5	Conclusions	71
4	Semi-automated mapping of geoconservation value in Lech, Vorarlberg	73
4.1	Introduction	74
4.2	Study area and data sources	75
4.3	Methods	76
4.3.1	Geomorphological mapping	76
4.3.2	Identification and ranking of potential geoconservation areas	77
4.4	Results and discussion	79
4.4.1	Geoconservation map	79
4.4.2	Potential geoconservation sites	80
4.5	Final remarks	83
5	Geomorphological change detection using object-based feature extraction from multi-temporal LiDAR DTMs	87
5.1	Introduction	88
5.2	Study area	88
5.3	Methods	89
5.3.1	Lidar data processing	89
5.3.2	Object-based feature classification and extraction	89
5.3.3	Feature-based change analysis	90
5.4	Results and discussion	90
5.4.1	Lidar point processing	90
5.4.2	Classifications	91
5.4.3	Change detection	92
5.5	Conclusions	94
6	Modeling channel incision and alpine hillslope development using laser altimetry data	97
6.1	Introduction	98
6.2	Field setting	99
6.3	LiDAR data and processing	100
6.4	Methods	102
6.4.1	Initiation (1) module	102
6.4.2	The CIM (2) module	104
6.4.3	The landscape response (3) module	105
6.4.4	Model evaluation (4) module	106

6.5	Results	106
6.5.1	Model results	108
6.6	Discussion	110
6.6.1	Initial model conditions	110
6.6.2	Model evaluation	111
6.7	Conclusions	112
7	Evaluating landscape evolution models with object-based landform classifications	115
7.1	Introduction	116
7.2	Study area and data sources	117
7.3	Methods	117
7.3.1	The modular erosion and sedimentation model	117
7.3.2	Landform classifications	121
7.4	Results	123
7.4.1	Model results	123
7.4.2	Model evaluation based on landform classifications	123
7.5	Discussion	127
7.6	Conclusions	128
	Epilogue	131
	About the author	135
	Bibliography	137
