Acknowledgements
This is the last chapter and it is one of the most important things to write. It was an incredible and invaluable 4 years that I spent in Amsterdam with helpful, friendly and intelligent colleagues and friends. To complete this thesis, there is a huge number of people who were either directly or indirectly involved to thank.

First of all I would like to express my sincere gratitude to my promoter Prof. Chris de Koster for giving me an opportunity to conduct the research and share experiences in Mass spectrometry of Biomacromolecules group (MSB). I deeply thank the financial support from the Higher Education Commission, Royal Thai government. I would like to extend my thanks to MSB for financial support for all other expenses throughout past 4 years of my study.

I would like to express my sincerest thanks to my co-promoter Dr. Luitzen de Jong, who is also my daily supervisor, for his intellectual guidance, excellent supervision, and infinite patience for correcting my mistake both in science and life. Luitzen, it was my pleasure working with you. You have unlimited energy towards science and due to your research spirit, the word “give up” was deleted from your dictionary! Apart from the cross-linking, I also always enjoyed listening the cultural and historical stories from you. I have learnt so much from you. I would like to take this opportunity to thank both you and Chris again for a very fast correcting my thesis.

I would like to extend my sincerest thanks and appreciation to the members of my doctoral committee, Prof. A. Sinz, Dr. S. Luijink, Prof. P.J. Schoenmakers, Prof. H. Hiemstra, Prof. S. Brul for investing their precious time to review this thesis and valuable comments.

I would like to express my sincere thanks to all the present and former members of Mass spectrometry of Biomacromolecules group. Leo, thanks for your invaluable guidance, constructive criticisms and generous helps especially about FTMS analysis. The quote that you like as promised, I add it here “a thing of beauty is a joy forever: Its loveliness increases; it will never, Pass into nothingness”! Henk, thanks for technical support, many mass spectrometry tips and particularly encouragements that you always gave me exactly the time that I needed. Winfried, thanks for being so considerate and allowing me to bother you, particularly about the server, at any point of time, even 11 pm on weekend! I deeply appreciate your skill for repairing instruments in the lab. I believe that there is nothing you cannot repair! Merel, thanks for technical supports and helpful discussions both in and out of science, particularly in the early stage of my PhD. Throughout the past four years of my study, I particularly thank Wishwas, who is also my paranymph. Thanks for being a nice buddy throughout past four years and I appreciate your friendship and your help in scientific field as well as in personal life. I enjoyed a lot roaming around in Holland taking photos together with you and fun trips in Europe. I liked our discussions about languages, especially about the similarity between Marathi and Thai, foods and religions. I wish you all the best for your future career and life. Sacha, thanks for introducing me many exotic and tasty beers and providing useful discussions. Wish you success for your PhD study.

I would like to take this opportunity to acknowledge all of our collaborators for their technical support, countless help and fruitful discussions. Jos Aren provided technical support for
biological experiments. Linde Smeenk, Martin Wanner and Jan H. van Maarseveen help the synthesis of BAMG and other reagents. Prof. Evgeny Nudler, Dr. Vladimir Svetlov, Dr. Peter Lewis and Dr. Xiao Yang provided RNAP-helicases and expertise in the field. Special thanks go to Katelyn McGary for her contribution to RNAP-UvrD experiment. I wish you success and good luck for your PhD!

I would like to thank my friends Yusuke Nakasone, Orawan Borirak, Nol Chindapol, Rachna Pandey and Churat Weerapan for their advices and encouragement in science and moral support in life. I extend my appreciation to my friends who met me during their master projects in UvA. Roberto, thanks for always being a nice friend. The Italian food you cooked was superb! Thank you and your family for a warmth accommodation during my stay in Italy. I hope we can go to Costiera Amalfitana together again. Abeer, thanks for many scientific and non-scientific (horror) discussions. I deeply appreciate your advanced tips for building muscle. I agree with you that Ronaldo is the best football player but the one from Brazil not Portugal! Behrad contributed to this thesis during his master study. Behrad, it was my pleasure working with you. Thanks for many nice stories, funny jokes and of course several brilliant ideas for programming. I wish you very best in your future career.

Finally, my deepest gratitude goes to my family and Weina Du for their countless support, encouragement and endless love. Thanks for always being there for me!
