Summary v
Samenvatting ix
1 Introduction 1

2 Lattice-based Models 11
  2.1 A Lattice Model of Cancer Growth . . . . . . . . . . . . . . . . . 13
  2.2 General Characteristics of Lattice Models . . . . . . . . . . . . 14
  2.3 Cellular Automata . . . . . . . . . . . . . . . . . . . . . . . . . 17
  2.4 The Importance of Locality . . . . . . . . . . . . . . . . . . . . 20
  2.5 A Model of Embryogenesis . . . . . . . . . . . . . . . . . . . . . 21
  2.6 Lattice Gas Cellular Automata . . . . . . . . . . . . . . . . . . . 25
    2.6.1 A Model of Adhering Cells . . . . . . . . . . . . . . . . . 26
    2.6.2 A Model of Gliding Myxobacteria . . . . . . . . . . . . . 27
  2.7 The Mechanics of Cell Aggregates . . . . . . . . . . . . . . . . 30
  2.8 The Cellular Potts Model . . . . . . . . . . . . . . . . . . . . . 36
    2.8.1 The Modified Metropolis Algorithm . . . . . . . . . . . . 36
    2.8.2 The CPM Hamiltonian . . . . . . . . . . . . . . . . . . . . 38
    2.8.3 Modeling Cell-sorting Using the CPM . . . . . . . . . . . 38
    2.8.4 Extensions of the CPM Hamiltonian . . . . . . . . . . . . 39
    2.8.5 Other Applications of the CPM . . . . . . . . . . . . . . . 46
  2.9 Discussion . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 48

3 Lattice-free Models 51
3.1 Newtonian Mechanics and Microbiological Systems

3.1.1 The Movement of a Single Particle

3.1.2 The Movement of a System of Particles

3.1.3 Bodies Immersed in Fluids

3.1.4 The Motility of Microorganisms

3.1.5 Specifying Forces

3.1.6 Numerical Integration of the Equations of Motion

3.2 Cells as Spheres and Ellipsoids

3.2.1 A Model of Swimming Bacteria

3.2.2 The Hertz Model for Elastic Spheres

3.2.3 Adhesion Between Spheres

3.2.4 Brownian Motion

3.2.5 Cells as Viscoelastic Ellipsoids

3.3 Cells as Simple Polygons

3.3.1 Voronoi Tessellation

3.3.2 Modeling Cells as Voronoi Domains

3.3.3 Honda’s Vertex Dynamics

3.3.4 The Finite Element Method

3.4 Cells as Complex Polygons

3.4.1 Intracellular Forces

3.4.2 Intercellular Forces

3.4.3 The Immersed Boundary Method

3.5 Cells as Particle Clouds

3.6 Discussion

4 Modeling Nematostella Gastrulation

4.1 Introduction

4.2 Methods

4.2.1 Embryo Preparation

4.2.2 Morphometrics

4.2.3 The Model

4.3 Results

4.3.1 Morphometrics

4.3.2 Mechanical Equilibrium of the Blastula

4.3.3 Bottle Cells are a Consequence of Cell Contractility, Low Cell-cell Adhesion and Mechanical Constraint

4.3.4 Simulating Gastrulation
## Contents

4.4 Discussion .......................... 124  
4.4.1 Bottle Cell Formation .............. 124  
4.4.2 Model Validity .................... 128  
4.4.3 Apico-basal Contraction of the Endoderm .......... 130  
4.4.4 Volume Regulation .................. 130  
4.4.5 Two- vs Three-Dimensional Models .......... 131  
4.4.6 Outlook .......................... 132  

5 Modeling Filamentous Cyanobacteria 135  
5.1 Introduction .......................... 135  
5.2 Methods .............................. 139  
5.2.1 A Model of Filamentous Cyanobacteria .......... 139  
5.2.2 Simulation Setup ................... 144  
5.2.3 Programming and Data Analysis .......... 144  
5.3 Results .............................. 145  
5.3.1 Modeling Cyanographs ............... 145  
5.3.2 A Heterogeneous Population in a Static Light Field .......... 149  
5.3.3 A Heterogeneous Population in a Dynamic Light Field .......... 151  
5.4 Discussion .......................... 154  
5.4.1 Photophobia as an Exposure Optimization Mechanism .......... 154  
5.4.2 Long Trichomes Enhance Exposure Optimization .......... 155  
5.4.3 Fast Gliding Enhances Exposure Optimization .......... 156  
5.4.4 Is the Trichome Optimal for Photomovement? .......... 157  
5.4.5 Future Work ........................ 158  

6 Modeling Reticulate Biofilms 159  
6.1 Introduction .......................... 159  
6.2 Methods .............................. 162  
6.2.1 Biological Background ............... 162  
6.2.2 Model Geometry .................... 163  
6.2.3 Elasticity .......................... 164  
6.2.4 Gliding ............................ 164  
6.2.5 Contact Interaction .................. 165  
6.2.6 Boundary and Initial Conditions .......... 169  
6.2.7 Nondimensionalization ............... 169  
6.2.8 Parameters .......................... 170  
6.2.9 Algorithms and Statistics ............... 172
6.3 Results ......................................................... 174
   6.3.1 Varying Cohesion Strength ......................... 174
   6.3.2 Domain Size, Density and Reversal Frequency ...... 180
   6.3.3 Revisiting Low Cohesion ............................. 181
6.4 Discussion .................................................. 184
6.5 Conclusions ................................................ 187

7 Conclusions ................................................ 189

Acknowledgements .......................................... 196

References ................................................. 198
