WORDS OF THANKS

I was interested in academics and in scientific writing since early in my residency, seeing a chance to publish as a challenge. However having a large scope of interests does not contribute to the writing of a thesis. The main obstacle to this thesis was probably the need to concentrate on one area in the vast field of plastic surgery. The choice of plastic surgery of the breast seemed to me a natural choice due to my clinical interest and activity in the field.

This thesis is about clinical cases involving patients. I therefore want to thank the many patients that I have personally treated as well as the thousands of patients whose pooled data I used. I also want to thank my colleagues known and unknown, who have contributed to this thesis by treating those patients.

This thesis is based on the experience gained in my years in the medical field. As such it is essential to thank all those who have contributed along the years.

Arye and Eleanor Lapid, Mummy and Daddy, You motivated me to study, we used to conduct intellectual discussions albeit more on politics and humanities than on medical topics.

Professor Leon Perlemuter, my cousin was one of the first physicians I knew, and a source of inspiration, it was a pleasure to be able to work together on one of the chapters of this book.

Ernst Gortzak, my father in law and retired breast surgeon, also contributed to my interest in the field. All the numerous teachers, tutors and colleagues in the medical school the residency and my fellowship certainly contributed to forming who I am professionally today.

Dr. Joris Hage, my move to Amsterdam was made possible by your help.

Prof. dr. Chantal van der Horst, the head of the department of plastic surgery at the AMC and the supervisor of this thesis. Chantal, you made this possible first by letting me come and work in Amsterdam for a year which has turned out much longer, and further by giving me the freedom to peruse my own course in the completion of this thesis.

My colleagues at the AMC, staff surgeons, residents and nurses who helped me learn Dutch and try to understand the Dutch medical system, which however remains a Sisyphus task. At the outpatient clinic Trees Kuypers was of great help and support. Vera van Vuure, the secretary of our department was of great help in simplifying the bureaucratic and administrative hurdles.

Writing a scientific paper is usually not a solo endeavor but a teamwork. I am indebted to all of my co-authors for their enthusiasm and hard work, I learnt from the more experienced of them, as well as from tutoring the younger ones who still plan to pursue a career in plastic surgery.

Dr. Lucy Overbeek, the contribution of PALGA was important I enjoyed discussing with the plans for these studies and look forward to future projects.
WORDS OF THANKS

Prof. dr. Hugo Heij, I know that breast problems are rare in pediatric patients. I appreciate your reading of this thesis.

Prof. dr. Jean Klinkenbijl, an oncological surgeon at the AMC. We have been working together for some time, I hope this fruitful collaboration will continue and benefit our mutual patients.

Prof. dr. Mario Maas, an expert in skeletal radiology with an never ending knowledge and most importantly one of the most collegial doctors I know.

Prof. dr. Marco Ritt, head of the department of plastic surgery at the VU. I know that your main professional interest is hand surgery, and I appreciate your role in the commission, and look forward to more interaction with the merger of the AMC and the VU.

Dr. Simon Strackee, although you prefer hands to breasts and presently rarely operate breasts, I know I can count on your vast knowledge when confronted with a difficult clinical decision.

Dr. Leonie Woerdeman, a plastic surgeon specializing in breast reconstruction. I appreciate your reading of this thesis and look forward to your challenging questions.

Talanat and Peter, for your long-distance support and interest in my endeavor.

Ruthie my loving wife, for supporting me all the years, for encouraging me to also write a thesis, for reading my papers which are far from the eye. And for being my best friend and partner.

Noam, Eran, and Hadar, my children. I hope I don’t tire you with medical discussions, and shock you with gruesome photo’s when you look behind my back when I work on the computer. Don’t worry, now that I have finished this thesis I will not waste more of your precious time.
