ACKNOWLEDGEMENTS

The undertaking of a PhD thesis is journey through the wilderness that is guided by someone constantly encouraging you to stay on course and move toward the light. In my case I was lucky to have as my guide Professor Dr. Guido Dedene, to whom I want to express my deep and heartfelt gratitude. Our collaboration on the topics of technology and productivity began in November, 1987, during a conference in Edinburgh, Scotland. While our paths have, over the years, taken different directions, they have always re-connected at critical junctures. However no time was more critical than in 2008, during the beginning of my tenure at OpenConnect, when the desire to solve perplexing problems met the need for scientific research. It was Professor Dr. Dedene who convinced me that I could indeed solve some of those problems if I was willing to undertake the journey. I would also like to thank my co-Promoter, Professor Dr. Ir. Rik Maes, and Professor Dr. Stijn Viaene who patiently listened to my ideas and provided useful feedback on how to approach the topic. I thank sincerely Prof. Dr. Hans Jägers for stressing the importance of finding the appropriate Research Methodology. Prof. Dr. Aimé Heene was linking our work to Information and Communication Strategies and are the augmentation to ICT-based Services. I want to acknowledge in particular the University of Amsterdam, Faculty of Business and Economics, for allowing me to develop this work, which resulted in this thesis.

Additionally, I would like to thank two of my recent fellow travelers and, at times, collaborators on the journey, Dr. Jonas Poelmans and Dr. Paul Ezinga for sharing insights on areas of Data Discovery, C-K Theory, FCA and how they could be applied to Process Discovery. Our discussions were always interesting and led to a number of joint publications. The three PhD-thesis works, Jonas at KU Leuven, and Paul and myself at the University of Amsterdam, can be seen as a “tryptique” on Discovery, exploring the exciting frontiers of contemporary Business and Process Intelligence.

I would also like to thank all of my colleagues at OpenConnect and specifically, Stuart Burris, Dr. Chris Houck, Alex Moulas, Eric Armstrong, Kip Brewer, Kevin Culliton, David Parkes, Mike Darrish and Rene Schoenauer for their tireless efforts to ensure the success of the technology and the customer implementations described in the case studies. Additionally, their assistance and feedback on sections of this thesis were invaluable. Also, I would like to thank my assistant, Carla St. Leon, for scheduling my time, arranging travel, coordinating conference calls and assisting in the final production of this thesis.

Some of the case studies would have been impossible without the collaboration of the people that were driving these projects. In particular I would like to express sincere thanks to Gerda Verheyden and Herman Mussele at the GZA cancer clinic in Antwerp, Belgium for the last case study in chapter 5 (which was conducted in collaboration with Jonas Poelmans). Finally, I thank Rick Warnar from DENION, the Netherlands, for his kind cooperation in the second case study of chapter 5 (in particular for his drive for the “time and motion” measurements).
Additionally, I would like to express my deepest appreciation to Deborah Burney for the encouragement to remain on the path, especially during the darkest times; your love means more to me than I can ever hope to fully express.

Finally, I want to thank the KU Leuven, who enabled the OpenConnect Chair in Business Process Discovery and Analytics, under whose auspices, much of this work was accomplished.
