We study aspects of the grammar of natural sign languages, their acquisition and diachronic change, and in how far sign languages differ from each other in various grammatical domains.

**Grammar & Description**

Enoch Aboh, Vadim Kimmelman, Ulrika Klop, Vanja de Lint, Marloes Oomen, Roland Pfau

- Project: Descriptive grammar of Sign Language of the Netherlands (NGT). Implementing previous research & conducting original research, e.g. on conditional clauses:
  - What are nonmanual markers of conditionals in NGT?
  - Results: 1. Raised eyebrows seem optional (unlike in other sign languages); 2. Head movement and/or tilt seems obligatory; 3. When a manual marker is present, nonmanual markers are used less frequently.

**Body-anchored verbs**

- How does iconicity (form-meaning relation) affect sign language structure?
- Body-anchored verbs: (examples from NGT)
  - LOVE, RELIEVED, EAT
  - Result: only first person subject (‘I’) can be dropped due to iconic associations:

**Classifier predicates**

- Classifier predicates: verbs of movement/location; the handshape classifies an argument
- Research on ASL: systematic connection between argument structure and classifier type
- Results: classifier predicates in Russian Sign Language & 4 other sign languages have complex event/argument structures

**Second language acquisition**

- How do adults who acquire a sign language as a second language learn to use the signing space to express grammatical relations?
  1. Case studies (n=2, longitudinal)
  2. Elicitation study (n=14, longitudinal) into classifiers and agreement verbs
  3. Intervention study (2018) - does explicit instruction help?

**Sign language acquisition**

Eveline Boers-Visker, Beppie van den Bogaerde

- How do deaf mothers and their deaf and hearing children combine spoken and signed language?
  - Results: utterances can consist of following combinations:
    - Fully signed and fully spoken
      - signs: YOU WALK TO CAMP^FIRE (NGT or NL word order)
      - words: you walk to campfire
    - Mainly signed, with words produced simultaneously
      - signs: YOU WALK TO CAMP^FIRE (usually NGT word order)
      - words: fire
    - Mainly spoken, with signs produced simultaneously
      - signs: WALK CAMP^FIRE (usually NL word order)
      - words: you walk to campfire
  - Mixed signs and words are produced simultaneously, but content differs, e.g.
    - signs: HUGGING...........
    - words: you sweet rabbit

**Bimodal bilingualism**

- How do deaf mothers and their deaf and hearing children combine spoken and signed language?
  - Results: utterances can consist of following combinations:
    - Fully signed and fully spoken
      - signs: YOU WALK TO CAMP^FIRE (NGT or NL word order)
      - words: you walk to campfire
    - Mainly signed, with words produced simultaneously
      - signs: YOU WALK TO CAMP^FIRE (usually NGT word order)
      - words: fire
    - Mainly spoken, with signs produced simultaneously
      - signs: WALK CAMP^FIRE (usually NL word order)
      - words: you walk to campfire
  - Mixed signs and words are produced simultaneously, but content differs, e.g.
    - signs: HUGGING...........
    - words: you sweet rabbit

Both signs and words are necessary for complete message.
