We study aspects of the grammar of natural sign languages, their acquisition and diachronic change, and in how far sign languages differ from each other in various grammatical domains.

**NGT GRAMMAR**

- Project: Descriptive grammar of Sign Language of the Netherlands (NGT). Implementing previous research & conducting original research, e.g. on conditional clauses:
  - What are nonmanual markers of conditionals in NGT?
  - Results:
    1. Raised eyebrows seem optional (unlike in other sign languages);
    2. Head movement and/or tilt seems obligatory;
    3. When a manual marker is present, nonmanual markers are used less frequently.

**BODY-ANCHORED VERBS**

- How does iconicity (form-meaning relation) affect sign language structure?

**CLASSIFIER PREDICATES**

- Classifier predicates: verbs of movement/location; the handshape classifies an argument

**SIGN LANGUAGE ACQUISITION**

**BIMODAL BILINGUALISM**

- How do deaf mothers and their deaf and hearing children combine spoken and signed language?
  - Results: utterances can consist of following combinations:
    - Fully signed and fully spoken
      - signs: YOU WALK TO CAMP^FIRE (NGT or NL word order)
      - words: you walk to campfire
    - Mainly signed, with words produced simultaneously
      - signs: YOU WALK TO CAMP^FIRE (usually NGT word order)
      - words: fire
    - Mainly spoken, with signs produced simultaneously
      - signs: WALK CAMP^FIRE (usually NL word order)
      - words: you walk to campfire
    - Mixed signs and words are produced simultaneously, but content differs, e.g.
      - signs: HUGGING...........
      - words: you sweet rabbit

**SECOND LANGUAGE ACQUISITION**

- How do adults who acquire a sign language as a second language learn to use the signing space to express grammatical relations?
  - 1. Case studies (n=2, longitudinal)
  - 2. Elicitation study (n=14, longitudinal) into classifiers and agreement verbs
  - 3. Intervention study (2018) - does explicit instruction help?

---

This project is part of the project “The SIGN-HUB: preserving, researching and fostering the linguistic, historical and cultural heritage of European Deaf signing communities with an integral resource”, funded by European Commission Horizon2020 grant no. 693349.

This project is carried out in collaboration with the Deaf Studies research group at the HU University of Applied Sciences Utrecht.
