Citation for published version (APA):
We study aspects of the grammar of natural sign languages, their acquisition and diachronic change, and in how far sign languages differ from each other in various grammatical domains.

**NGT GRAMMAR**
- Project: Descriptive grammar of Sign Language of the Netherlands (NGT). Implementing previous research & conducting original research, e.g. on conditional clauses:
  - What are nonmanual markers of conditionals in NGT?
  - **Results:**
    1. Raised eyebrows seem optional (unlike in other sign languages);
    2. Head movement and/or tilt seems obligatory;
    3. When a manual marker is present, nonmanual markers are used less frequently.

**BIMODAL BILINGUALISM**
- How do deaf mothers and their deaf and hearing children combine spoken and signed language?
- **Results:** utterances can consist of following combinations:
  - Fully signed and fully spoken
    - signs: YOU WALK TO CAMP FIRE (NGT or NL word order)
    - words: you walk to campfire
  - Mainly signed, with words produced simultaneously
    - signs: YOU WALK TO CAMP FIRE (usually NGT word order)
    - words: fire
  - Mainly spoken, with signs produced simultaneously
    - signs: WALK CAMP ^FIRE (usually NL word order)
    - words: you walk to campfire
  - Mixed signs and words are produced simultaneously, but content differs, e.g.
    - signs: HUGGING........
    - words: you sweet rabbit
  - Both signs and words are necessary for complete message.

**CLASSIFIER PREDICATES**
- Classifier predicates: verbs of movement/location; the handshape classifies an argument
- Research on ASL: systematic connection between argument structure and classifier type
- **Results:** classifier predicates in Russian Sign Language & 4 other sign languages have complex event/argument structures
  - An example of stimuli: stills from a cartoon

**SECOND LANGUAGE ACQUISITION**
- How do adults who acquire a sign language as a second language learn to use the signing space to express grammatical relations?
  - 1. Case studies (n=2, longitudinal)
  - 2. Elicitation study (n=14, longitudinal) into classifiers and agreement verbs
  - 3. Intervention study (2018) - does explicit instruction help?
