Optical antennas on substrates and waveguides
Bernal Arango, F.

Citation for published version (APA):
Bernal Arango, F. (2014). Optical antennas on substrates and waveguides
Contents

1 Introduction 9
  1.1 Light and nano antennas 9
  1.2 Multipolar scatterers 14
  1.3 Polarizability tensor 17
  1.4 Nano antennas on substrates and waveguides 18
  1.5 Outline of this thesis 20
  References 22

2 Single Rod Antennas 27
  2.1 Introduction 27
  2.2 Experimental setup and methods 28
  2.3 Scattering of guided modes by single element antennas 32
  2.4 In-coupling by a single dipole antenna 36
  2.5 Conclusions 39
  References 40

3 Phased Array Antennas 43
  3.1 Introduction 43
  3.2 Multi-element antennas 45
  3.3 Measurements of waveguide excited multi-element antennas 48
  3.4 In-coupling by a Yagi-Uda antenna 51
  3.5 Conclusions 53
  References 55

4 Localized Excitation of Phased Array Antennas 57
  4.1 Introduction 57
  4.2 Monte Carlo study of random disorder 64
  4.3 Conclusions 69
  References 70
## 5 Polarizability Tensor Retrieval

5.1 Introduction
5.2 Surface integral equation method and $\alpha$-tensor retrieval
5.3 Benchmark of vector spherical harmonics and effective current density $\alpha$-retrieval
5.4 Polarizability retrieval applied to Kerker’s paradox
5.5 Conclusions

References

## 6 Designing Antennas with the Aid of the Polarizability Retrieval Method

6.1 Introduction
6.2 LC model for split rings
6.3 Retrieved polarizability tensor of split rings
6.4 Single split ring as a magnetic dipole converter
6.5 Split ring array antenna
6.6 Conclusions

References

## 7 Adding Electric Quadrupolar Terms to the Retrieval of the Polarizability Tensor

7.1 Introduction
7.2 Retrieval of quadrupoles and reduction of terms
7.3 Dolmen $\alpha^S$-tensor
7.4 Nanopyramids $\alpha^S$-tensor
7.5 Conclusions

References

## 8 Correcting the Super Polarizability for Antennas in Scattering Environments

8.1 Introduction
8.2 Back-action correction for hybridization with environments
8.3 Single particle on a Si substrate as directional antenna
8.4 Conclusions

References

## 9 Applications

9.1 Chemical and biological detection fluidic environment
9.2 Antennas and single emitters
9.3 On-chip integrated Coulomb-blockade photon sources
9.4 Design of antennas with asymmetrical scattering capabilities

References

### Appendix A Quadrupolar Fields and $12 \times 12 \alpha^S$-Tensor

### Appendix B Dolmen $\alpha^S$-Tensor Elements
