#### Disclaimer/Complaints regulations

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <https://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Protons and electrons are very light particles that can move with a high velocity, but in practice their transfer is strongly affected by the medium. The conductivity is governed by the solvent fluctuations.

Confinement of the solvent in one or more dimensions affects the transfer mechanism. The solvent reorganization free energy is an important part of both the redox potential and the acidity constants of acceptor solutes.
