Molecular simulations in electrochemistry

Electron and proton transfer reactions mediated by flavins in different molecular environments

Kılıç, M.

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: https://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
## Contents

1 Introduction 1
   1-1 Electron transfer in chemistry ............................................ 2
   1-2 Proton transfer in chemistry .............................................. 3
   1-3 Flavins in chemistry ..................................................... 4
   1-4 Molecular simulation .................................................... 5
   1-5 Model and methods ...................................................... 5
   1-6 This thesis ............................................................... 6

2 Techniques 9
   2-1 Marcus theory ............................................................ 10
   2-2 Calculation of $pK_a$ using molecular simulation ....................... 13
   2-3 Statistical thermodynamics ............................................. 15
   2-4 Molecular dynamics ..................................................... 16
   2-5 DFT–based molecular dynamics ......................................... 17
      2-5.1 Density Functional Theory .......................................... 19
      2-5.2 Born–Oppenheimer molecular dynamics ............................ 21
   2-6 Hybrid quantum mechanics / molecular mechanics .................... 22

3 First and second one-electron reduction of lumiflavin in water – a first principles molecular dynamics study 23
   3-1 Introduction ............................................................... 24
   3-2 Methods ................................................................. 25
      3-2.1 Computational setup ................................................. 29
   3-3 Results ................................................................. 30
      3-3.1 Lumiflavin in the gas phase ........................................ 30
      3-3.2 Lumiflavin in water, the solvent structure .................... 33
      3-3.3 Lumiflavin in water, redox properties .......................... 39
      3-3.4 Non–linearity, inner sphere fluctuations, temperature and finite size effects ............................. 41
   3-4 Conclusions .............................................................. 44
   3-5 Supporting information ................................................ 46
4 A microscopic picture of the solvent reorganization during electron transfer to flavin in water 51

4-1 Introduction ................................................. 52
4-2 Methods ..................................................... 53
  4-2.1 Calculation of redox potential .................................... 53
  4-2.2 Computational setup .......................................... 55
4-3 Results ........................................................ 56
  4-3.1 Reduction of lumiflavin in vacuum .............................. 56
  4-3.2 Reduction of lumiflavin in water solvent ...................... 58
  4-3.3 Inner sphere and solvent reorganization, solvation shell structure rearrangement ......................... 62
  4-3.4 Solvent reorganization, electronic effects ...................... 63
  4-3.5 Solvent reorganization, electrostatic potential and fluctuations ............................................. 67
4-4 Conclusions .................................................. 69
4-5 Appendix ..................................................... 74

5 Acidity constants of lumiflavin from first principles molecular dynamics simulations 75

5-1 Introduction .................................................. 76
5-2 Methods ...................................................... 79
  5-2.1 Calculation of pK \textsubscript{a} from constrained dynamics ............................................. 79
  5-2.2 Computational details ........................................ 81
5-3 Results and discussion .......................................... 82
5-4 Conclusions .................................................. 87
5-5 Supplementary information ....................................... 89
  5-5.1 Radial distribution functions .................................... 89
  5-5.2 Free energy profiles using the addition H\textsubscript{3}O\textsuperscript{+} restraint ........................................ 91

6 The reorganization free energies for electron transfer in proteins: Redox properties of flavin in BLUF and LOV Domains 93

6-1 Introduction .................................................. 94
6-2 Methods ..................................................... 97
  6-2.1 Computational setup ........................................ 98
6-3 Results ....................................................... 99
  6-3.1 Reduction of flavin in different environments .................. 99
  6-3.2 Characterization of protein and solvent coupling with flavin redox properties ............................... 103
6-4 Conclusions .................................................. 118

Summary .......................................................... 121

Samenvatting ..................................................... 123
