It all started with a short conversation in Dhaka, in 2007 at the planning meeting to initiate the National Tuberculosis Prevalence Survey. Visiting KNCV consultant Dr. Frank van Leth discussed the possibilities of writing a doctoral thesis out of survey and related data. Dr. K. Zaman proposed my name and I was pleased to accept it. It took a long time for a programmatic person like me to turn into a researcher and to complete this task. It is impossible to list and convey my respect and gratitude to all the persons contributed and supported the works presented in this thesis, only some of whom I could possibly mention here.

Prof. M.W. Borgdorff

Prof. Borgdorff accepted me to pursue this work after the first interview in early 2008 at KNCV. Immediately he started to lay out the plans on how to proceed and identifying possible areas research, investigations and analyses and the manuscripts those should be prepared out of the results. And this continued all through these years till competition of this thesis. Despite his tight schedule, Prof. Borgdorff always made time to discuss problems and offered valuable advices. Discussions with him always resulted in further analysis, pursuing more and more in-depth into data in order to making it meaningful. I completely owe this accomplishment to his support.

Dr. F.C.M van Leth

Frank virtually took me by hand and guided me throughout the task step by step. We had continuous discussion on the methodology of the prevalence survey, the tuberculin survey, and other studies at KNCV, in Amsterdam and in Bangladesh. We had been discussing during long trip to “Terokhada” in extreme south of Bangladesh and to older parts of Dhaka in Ramadan (Fasting month) or when he was showing me around Amsterdam. He used to sit by me at KNCV, provided hands on training and showed me not only the tricks of Stata, but also to look beyond the figures and to find out the meanings behind them. He made me heavily indebted to him by putting his trust on me. As a guide and a friend, Frank, our Journey I believe will not end here.

Dr. K. Zaman

It was outstanding for a gentle soft spoken person like Dr. K. Zaman to stand by me and put all his support for this work. We implemented the survey, performed our analyses and wrote all papers together. His guidance was academic and enlightening which ultimately lead me to complete this thesis.
KNCV Tuberculosis Foundation

I am grateful to KNCV tuberculosis foundation for not only that they provided funding support for this doctoral work, but that they created an environment for me to actually complete this. KNCV office in The Hague was my shelter during my stay in the Netherlands. All members of the epidemiological unit of KNCV were congenial to me and provided all kinds of support during my working days with them. Their passion for work encouraged me to finish my work, and their perseverance inspired me to continue the work all through. Thank you KNCV.

icddr,b and my colleagues

I got into this task as I was working for icddr,b. icddr,b supported me with all necessary administrative needs for this task to complete. My sincere thanks Dr. Steve Luby, Director, Centre for Communicable Diseases, icddr,b who supported my application, Dr. Abbas Bhuiya, Director, Centre for Equity and Health Systems, icddr,b who allowed me the opportunity to continue with this work.

I am grateful to my fellow co-investigators and colleagues with whom I implemented all the studies in this thesis book and who was always a source of inspiration to me to pursue this work with them. My sincere thanks to Dr. M. A. Quaiyum, Dr. Sayera Banu, Dr. Nafisa Lira Huq, Dr. Nafis Al Huq, Dr. Rukhsana Gazi, Mr. Nirod Chandra Saha and about 50 study team members for their support and inspiration.

NTP and partners

I am thankful to National Tuberculosis Control Programme (NTP) of Bangladesh for helping me in every respect to implement all the study activities. NTP partners, like BRAC and Damien Foundation (DF) were instrumental in field level materialization of the study. Particularly, I would like to thank Dr. Akramul Islam, Director, BRAC Health and Nutrition Programme and Dr. A.H. Salim, Country Director, DF, Bangladesh for their encouragement during the study period and reviewing the manuscripts. I would also like to extend my thanks to Dr. Erwin Cooreman, Medical Officer (TB), World Health Organization (WHO), Bangladesh for his extraordinary efforts to make available funds to finish the study activities and being an excellent co-author of the manuscripts.

Special thanks goes to WHO, USAID and GFATM, who funded all the studies included in this thesis.

Brothers at Huize St. Jozef, Westeinde 101, 2512 GW The Hague

Brothers at Huzie St. Jozef, provided me second home in The Hague. I passed many warm days and nights in the cold winter months with them like in a family. I am grateful to all of them, particularly, Franz, who took extraordinary care to every needs of mine.

Franz, thank you for being my paranimfen. I am grateful and happy that you agreed to stay by me.

Patients and participants

I am grateful to all the patients and participants from all over Bangladesh who took part in the research work. Without their consent and collaboration the work of this thesis would never have been accomplished.

My Family

Shakeel and Catharien, You were always with me throughout this journey. Thank you.

My Family was virtually always with me at home and in abroad with whole hearted care and support to enable me to continue with this work. They sacrificed many “EIDS’ without me and never complained. I am indebted to you all; my loving wife Mala, my beloved daughter and son, Paroma and Rajit.
